Journey's End: A Frieren Inspired TTRPG

Introduction

Like other TTRPGs such as D&D and Daggerheart, Journey's End is a role-playing game about telling stories within fantastical worlds. Specifically, Journey's End borrows the worldbuilding and magic system from the popular manga and anime 葬そう送そうのフリーレン, also known as **Frieren: Beyond Journey's End**. While some elements have to be extrapolated and interpreted to place into a gaming space, the hope is to recreate the feeling of fantasy that the series invokes.

Magic is the Realm of Imagination

There are many different worlds that exist within Journey's End. You could play within the world from the series or in one of your own creation. However, the mechanics of Journey's End abide by one cardinal rule: Magic is the Realm of Imagination. What that means is that characters within the world of Journey's End should be free to adjust, change, and improve upon their skills and abilities. That is not to say that anything a character believes in can be accomplished, as there should always be an appropriate cost to power, but the system should be incredibly modular and actively invite player's to invent mechanics of their own.

For instance, a mage may learn the Zoltraak, a basic offensive spell. But after taking time to study and spending some amount of skill points (explained later!), may create a specialized version of Zoltraak that separates into many small beams.

This design principle also applies to non-magical warriors, as their techniques can also be augmented or improved to their liking.

Using This Book

This book is separated into many chapters, but fall into four main parts that will get you started on playing the game!

1. Character Creation: the rules and guidance to creating a character from scratch, specifically geared towards a new adventurer or mage.
2. Rules of Play: the specific rules of how to play the game, from combat to travel.
3. Running Journey's End: guidance for the Game Master on how to run an adventure or longer journey in this system.
4. Index: a directory for classes, races, equipment, techniques, and spells available to use in this edition of the book.

Words from the Author

Hi! I hope that you enjoy the rest of this book and also the system if you end up playing it. I would like to make it known that I have only watched the anime of the series, so I do not have knowledge from the manga that has not been adapted yet. While I have done as much research as I could, please know that this is an interpretation of a work of art. What I interpret to be true may not be what you or others interpret, but that is okay! If you have means to contact me, I would very much like to hear your thoughts and critiques of this system.

This system is heavily inspired by existing TTRPGs like **Dungeons & Dragons, Daggerheart, and FATE**

I have no official affiliation with the creator of **Frieren: Beyond Journey's End**. I am just a fan who loves TTRPGs and collaborative storytelling. Please, feel free to adjust the system how you see fit for your own games. If you choose to release

your version of the system, I would appreciate being mentioned or credited in some way :)

Creating a Character

Step by Step

In order to create a character, you must first know what kind of person you want to be within the story. Are you a stoic warrior with a heart of gold? A greedy mage in search of the most powerful spells? Or perhaps a corrupt priest who simply wishes to find the best alcohol in the world?

In exactly what order you build your character in is your choice, but this is a list of things you will need to play Journey's End (and also the order in which the book details them):

1. **Class(es):** Every character has skill points in at least one class, which will define or shape the abilities of what you can do.
2. **Race:** Choose between the innovative humans, long-living elves, or the hearty dwarves!
3. **Traits:** Determine what your character is good at, from lifting heavy objects to beguiling others.
4. **Experiences:** Write out some background information that influences more specific skills your character excels in.
5. **Equipment:** Choose items for your character to start their journey with, from axes to staffs to absolutely nothing if you so wish.

Choose a Class

Your class is a defining feature of your character, determining whether you wield magic or weapons and how you acquire your abilities. While each class is better suited to certain roles, such as the Priest excelling in healing, every class is capable of being built in many different ways.

Class Options

Below is a list of classes that are available to choose from. More details regarding each class can be found in a later section of the book.

Each class comes with two **subclasses** that provide more distinction of your character. When you choose a class, you will immediately choose a subclass.

Hero

Heroes are those who stand up for their values with great courage. Often guided by an unwavering sense of justice, they are a class of charismatic individuals that serve as both agile fighters and moral support.

Inspiring. A beacon of hope or triumph to those who see you, you excel at bringing out the best in others.

Paragon. An agile warrior feared by those who stand against your values, you strike faster than the eye can see.

Mage

Mages study for years to develop their mana to cast spells. While their strength lies in training and inner nature, it all hinges on their ability to visualize the cause and effects of the spell. Mages are often educated individuals who offer both utility and raw power.

Studied. One who has dedicated many hours to learning and understanding magic, you have a vast amount of spells at your disposal.

Instinctual. One who has focused entirely on the visualization of your magic, you have a talent for augmenting spells.

Monk

Monks are disciplined in both body and mind. Often pious towards the Goddess of Creation, they undergo harsh training to survive on little and rely only on their bodies to defend themselves. They are a self-reliant class with very few direct weaknesses.

Wise. You have learned more than a few hard lessons in your life, allowing you to guide others on their journey.

Martial. You have learned to wield discipline through physical force, using your own body to strike back at those who would do you harm.

Priest

Priests are holy spellcasters born with the gift to wield the Magic of the Goddess. Often becoming a member of the clergy, they focus on supporting their allies through healing and buffs. However, they are still very capable of doing harm.

Healer. Your talents have led you to excel at alleviating injuries and ailments from others, making sure everyone stays alive on their journey.

Enchanter. Your talents focus on bolstering those around you, ensuring that they fight stronger than ever.

Thief

Thieves are sneaky individuals who exploit weaknesses and tend to avoid direct confrontation. Their strength lies in their cunning and resourcefulness, finding ways to escape from any bad situation.

Delver. Your time robbing homes or plundering dungeons has honed your senses, allowing you to detect traps and hidden threats.

Connected. Your time interacting with others has built a large web of contacts, allowing you to call on their aid when necessary.

Warrior

Warriors are trained fighters who specialize in close-quarters combat and defensive maneuvers. They are able to perform superhuman displays of strength and resilience, allowing them to serve as frontliners to their allies.

Tough. You are trained to resist all threats, physical or magical, so that you may take the pain that others can not.

Brutal. You are trained to inflict unbelievable damage upon your targets, slaying them before they can do the same to you.

Multiclassing

While all adventurers have a class, some may exhibit traits from multiple classes. To do so costs **Skill Points**, which will be detailed later in the **Assigning Traits** section (and also the **Rules of Play** section).

Choose a Race

Your race is a marker of your character's heritage and natural abilities. Each race comes with a unique feature that influences their abilities.

While the series has only shown humans, elves, and dwarves, you can use those as a guide to implement your own fantastical people!

Race Options

Below is a list of races that are available to choose from. More details regarding each race can be found in a later section of the book.

Human

Humans are short-lived but highly innovative and curious people. They are highly sociable, compensating for their short lifespans by passing on their knowledge to the next generation. As a result, their species has advanced rapidly in fields like medicine, engineering, and magic.

Human adults often reach heights between 4 and 7 feet tall, and live for up to a century.

Elf

Elves are a rare, often isolated people who are capable of living for thousands of years. To them, months could feel like a mere day. Elves tend to have difficulty with boredom and feel little urgency outside of life-threatening events. Being living witnesses to history, they are often well learned and well travelled.

Elven adults often grow to be between 4 and 5 feet tall, and live for so long that many could consider them ageless.

Dwarf

Dwarves are naturally strong and durable people, often possessing talents in physically demanding professions. Dwarven culture often pushes them to master a single skill like blacksmithing or combat. Though they live for centuries, many still seek companionship with humans and their own kind.

Dwarven adults often grow to be between 3 and 4 feet tall and live for about 4 centuries.

Assigning Traits

When creating a character, you'll need to determine the basic skills and traits your character is good at. These are done through a resource called **Skill Points**.

Skill Points

Journey's End uses a Skill Point system rather than a levelling system to allow greater customization. Skill points can be used for any of the following:

- Improving any of the Basic Traits
- Improving any of your Class Traits
- Improving any of your Class Tiers
- Improving any of your Experiences
- Learning new techniques or spells
- Improving any of your techniques or spells
- Taking an additional Class

When you're creating a character, you start out with 40 **Skill Points**. However, you must spend a certain number of **Skill Points** in the following ways:

- At least 18 **Skill Points** on **Basic Traits**
- At least 9 **Skill Points** on **Class Traits**
- At least 8 **Skill Points** on **Spells or Techniques**

The last 5 **Skill Points** may be spent in any of the 3 categories above.

Tiers

Classes, traits, spells, and techniques all have a **Tier**, which represents how proficient you are in that particular field. When you first create a character, they all start at **Tier 1**. Whenever you improve a trait, spell, or technique with **Skill Points**, its **Tier** increases by 1. The cost to improve a trait, spell, or technique equals its current **Tier.**

Basic Traits

There are six Basic Traits, also known as Stats:

- Agility
- Charisma
- Dexterity
- Instinct
- Knowledge
- Strength

Each Basic Trait represents a different type of natural or trained ability. All Basic Traits have a modifier of -1 at **Tier 1.**

Class Traits

Class Traits are listed in your class description and include traits such as Health, Stamina, and Mana. Unlike Basic Traits, Class Traits may begin at a value specified by your class.

Your class also denotes your **Primary Trait**, which is the trait most associated with what your class excels in. If your Spells or Techniques require a **check,** it will be made using your **Primary Trait.**

Class Tiers

Class Tiers represents how skilled you are in a given class. Reaching higher Class Tiers grants you additional Class Features or Subclass Features. Class Tiers are unique to each class you have skill points in.

Unlike other improvable traits, Class Tiers cost more skill points. The cost to improve a Class Tier is 5 × its current **Tier**.

High Tier and Total Tier

Some rules refer to your **Total Tier** or **High Tier**. Your **Total Tier** is the combined total of all your class Tiers. Your **High Tier** is the highest Tier you have in a single class.

Experiences

Experiences are lessons or skills your character has learned throughout their life before adventuring. They are boiled down to a single word or short phrase that encompasses the experience.

Each character starts with two Experiences. You should come up with a short list of possible Experiences based on your character's backstory and work with your GM (or even other players) to determine which ones to choose and in what kind of scenarios they may be used in.
While there is no defined list of Experiences, the following is a list of examples:

- **Backgrounds:** Blacksmith, Bouncer, Teacher, Scholar, Acrobat, Soldier, Criminal, Town Guard, Jester, Musician
- **Characteristics:** Stone-faced, Observant, Charming, Intimidating, Silver-Tongued
- **Specialities:** Mediator, Poison Expert, Baffling Strength, Climber
- **Phrases:** Now You See Me, Take it or Leave it, By Your Side, Look at Me, It's You and Me.

When your character makes a trait check, you may apply any Experience that fits the given situation. All Experiences have a modifier of +2 at **Tier 1**.

Learning Techniques and Spells

Techniques and Spells are specific actions your character can take during their journey. Each class has a specific list of techniques or spells to choose from.

All Techniques and Spells have a Tier requirement, which is displayed on their cards. If your Class Tier is not equal to or higher than the Tier requirement, you can not learn it.

Learning Techniques and Spells costs Skill Points, which is displayed on their cards.

Improving Techniques and Spells

Like improving Experiences or Class Traits, Techniques and Spells can be improved by spending Skill Points. Each Technique and Spell begins at Tier 1.

Improving Techniques and Spells enables you to augment them further, which will be described further in the upcoming **Rules of Play** sections.

Taking Another Class (Multiclassing)

As stated before, some characters can have Skill Points in multiple classes. Doing so represents spending time and effort to be proficient in multiple fields.

Gaining a new class that is not your first costs 10 **Skill Points**. You gain the class's **Tier 1** features and may begin learning **Spells** or **Techniques** from that class. You also gain its **Class Traits**. However, you do not replace any **class traits** you have already received from another **class**.

For example, if your original class is a Mage and you multiclass into a Priest, both classes share the Mana **Class Trait**. In this case, you keep the value and Tier of your Mana **Class Trait** from the Mage.

The only excepton to this is your **Primary Trait**. If you gain another class that uses a different **Primary Trait**, you use the second **Primary Trait** for spells or techniques from the second class.

Equipment

Depending on the type of adventure your character is playing in and how far along their journey they already are, they may have more or less equipment than what is described here.

Choosing Starting Equipment

Depending on your original class, you will have a list of choices for the equipment you start out with. Generally, they will include the basic necessities for your class to function (holy scriptures for a priest or a weapon for a warrior).

You'll also have the choice for several "general" items, such as healing potions or rope that could aid you on your journey.

Starting Magical Items

If your GM allows it, you may choose to have a magical item that your character managed to acquire before the journey.

In the dedicated **Equipment** section, you'll find a table of basic magical items that are meant for new adventurers. If your character is starting out more experienced, you may be allowed to choose from more advanced tables.

Backstory

Every adventurer has a story prior to the journey. Who are you? Why do you adventure? What do you believe in?

Beyond that, however, is how do you relate or know your fellow adventurers? If you knew any of them before your first session, you should talk with the other player and determine what you know and think of each other.

Your character's backstory is deeply intertwined with their **Experiences**. If you have already written your character's **Experiences,** you should base your backstory around them and vice versa.

Backstory Probing Questions

If you are having trouble or want a starting point for your character's backstory, here are some questions to get you going!

If you want to select some randomly, you can roll a die displayed in the table's header.

Backstory Questions Table (d10)

What is an ideal or moral that you will (or hope to) always abide by?
When you were at your lowest, who carried you back to safety? Was it your family, a friend, or your own will?
Choose an **Experience** from your character sheet. What is the story behind it?
What has caused you to venture so far from home (physically and/or metaphorically)?
What is your character's favorite food? Favorite drink?
Someone desperate corners you in the alleyway and demands that you give them money or food. How do you handle the situation?
If you saw yourself in the mirror, what is the first thought that pops into your head?
Do you believe in the Goddess of Creation? What led you to have or not have faith?
What is a behavior, big or small, that is unique to you?
In what conditions did you live in as you grew up? Do you hail from a wealthy family, a criminal gang, or a simple, humble home?

Backstory Icebreaker Questions

If you have a connection to another player in the party, here are some questions to help determine how well the two of you know each other.

Backstory Icebreakers Table (d10)

What is an ideal or moral that you will (or hope to) always abide by?
When you were at your lowest, who carried you back to safety? Was it your family, a friend, or your own will?
Choose an **Experience** from your character sheet. What is the story behind it?
What has caused you to venture so far from home (physically and/or metaphorically)?
What is your character's favorite food? Favorite drink?
Someone desperate corners you in the alleyway and demands that you give them money or food. How do you handle the situation?
If you saw yourself in the mirror, what is the first thought that pops into your head?
Do you believe in the Goddess of Creation?

What led you to have or not have faith?
What is a behavior, big or small, that is unique to you?
In what conditions did you live in as you grew up? Do you hail from a wealthy family, a criminal gang, or a simple, humble home?

Rules of Play

Rules of Play

In this section, you'll learn the general flow of the game, along with core mechanics and how to play the game.

Flow of the Game

In Journey's End, gameplay is separated into sessions, which is just any time you and your friends gather to play. The structure of any given session can vary, so the Flow of the Game is more of a general pathway for a section of a session.

Throughout the game, the GM will be describing the world, environment, and people around the players. Meanwhile, the players are stating their actions, thoughts, and words to react to what the GM has described. Finally, the GM determines the consequences and outcomes of the player's actions (often time with a roll to determine success/failure).

This loop can be simplified into the following steps:

1. The GM describes the environment
2. The players and GM ask questions
3. The players and GM choose actions to take
4. The GM determines the results of the actions
5. Repeat

1. The GM Describes the Environment

The GM lays out the environment, dangers, and people surrounding the player characters. This could be stating how tall a building is, the sly smile of the merchant, or a large ball rolling towards the players.

2. The Players and GM Ask Questions

The players and GM ask questions to paint a clearer picture of the environment. These could be whether a player already has their sword drawn or how far away an enemy is.

3. The Players and GM Choose Actions

The players and the GM determine what their characters will do in response to the environment. These could include attacks against an enemy, smooth-talking an angry guard, or investigating a room for clues.

These almost always require the one performing the action to make a **check**, which is described in an upcoming section.

4. The GM Determines the Results

Depending on the outcome of any **checks** and if they pass a **difficulty class**, the GM narrates what happens because of it. The GM and players then make changes to any resources that were used or taken during the action.

5. Repeat

The game loop then repeats with the GM describing how the changes affect the environment around the players. Enough of these loops eventually create a cohesive story!

Core Mechanics

This section describes the core mechanics of Journey's End that apply to all characters.

Focus

Whenever a character, whether it be a player or a non-player character (NPC), is the primary focus of the scene, they have the **Focus** of the game. You can think of it as if the game were a movie or TV show. Whoever the camera is turned to has the **Focus**.

In certain cases, multiple characters could have the focus, though this is usually reserved for conversations. As soon as any of those characters takes an action, they take the **Focus.**

There is no specific order to who has the **Focus**, but the general rule of thumb is for every player to have a chance with the **Focus**. Also, the GM should be allowed to take the **Focus** whenever another character in the scene is acting.

Having the Focus

When you have the **Focus**, you can essentially treat it is as your "turn." There is no set amount of actions you can take while you have the **Focus**, but you should follow the flow of the narrative and grant others a chance to take the **Focus** when it makes sense. Sometimes, such as when your character is having a triumphant moment in their journey, it makes sense to take the **Focus** for an extended period of time.

Taking Actions

When you have the **Focus**, you will take **Actions**, which is anything you perform utilizing your skills, class features, techniques, or spells. Some examples are: casting a spell, making an attack, hiding in a corner, persuading a merchant to give you a discount, or climbing over a ledge.

Oftentimes, these **Actions** will force you to make a **Check**, which results in a success or a failure. Succeeding a **Check** means being able to perform what you set out to accomplish, while failing a check means the opposite.

When you take an **Action** but fail the **Check**, that can signal the GM to take the **Focus**.

GM Focus

When the GM has the Focus, it often means that an NPC or the environment is going to take their own **Actions** to affect the players. Similarly to a player's **Action**, most GM **Actions** require a **Check.**

The GM is able to take the **Focus** whenever they feel the story calls for it. In most cases, however, it will be for one of the following reasons:

- A player failed a **Check**
- The players have spent enough time without taking any **Actions**
- The GM spends **Doom** to interrupt the players.
- A new enemy, character, or shift in the environment makes a sudden appearance

The GM usually dictates when the **Focus** falls back on the players, but they should strike a balance so the players do not feel impotent.

Focus in Combat

Because Journey's End doesn't have definitive turns, the flow of combat is largely dictated exactly the same. However, the GM and the players should be extra vigilant in making sure the **Focus** is passed around evenly, so everyone has a chance to impact the battle.

Dice

Whenever you must determine if you can break down a door, how much damage you deal to an enemy, or how convincing of a lie you speak, you will need to roll dice.

Technically, you can use any system that can produce random numbers within a range, but traditionally, you would use the following:

- A twenty-sided die (d20)
- A twelve-sided die (d12)
- A ten-sided die (d10)
- A ten-sided percentile die
- An eight-sided die (d8)
- A six-sided die (d6)
- A four-sided die (d4)

Notice that after each die is a shortened moniker. Throughout this rulebook, we will be referring to these dice using the following system:

N d S

Where N is a number noting how many of these dice must be rolled, and S is the number of sides the die has. For instance: 3d6 means rolling three six-sided dice and summing the total.

A unique case is the d100, which actually rolls two dice: the d10 and the percentile die (also has ten sides, but its values are 00, 10, 20, etc.). To roll a d100 means rolling both and using the percentile die as the 10s place and the d10 as the 1s place. To roll a 100 on the d100, you must roll a 00 on the percentile die and a 0 on the d10.

Checks

When you take an **Action**, it will always force you to make what is called a **Check**. **Checks** are essentially a test of your character's capabilities combined with luck. Whenever you make a **Check**, you must roll a d20 and add any appropriate modifiers to the roll.

Certain techniques, spells, and features may allow you to add additional modifiers to your roll.

Every **check** has what is called a **Difficulty Class (DC)**, which is a set value to determine how difficult your action is. In most cases, the GM determines what the **DC** of a **check** is, with some exceptions such as attacks. The goal of any **check** is to have a final value equal to or greater than the **DC**.

Assigning a Basic Trait

Checks will usually have an associated Basic Trait, depending on what you are attempting to do. The GM will indicate this by telling you to "make a [Basic Trait] check." The following is a brief description of each Basic Trait and what it correlates to.

Agility

A high Agility indicates a character who is both quick and nimble. You'll make an Agility check to cover distances quickly, leap across a chasm, or navigate difficult terrain.

Charisma

A high Charisma indicates a character who is adept at navigating social situations. You'll make a Charisma check to lie, convince, or intimidate others.

Dexterity

A high Dexterity indicates a character who has precise control over their limbs and movements. You'll make a Dexterity Check to operate precise tools, shoot weapons, or remain unnoticed.

Instinct

A high Instinct indicates a character who is well aware of their surroundings. You'll make an

Instinct check to search, detect lies, or navigate the world around you.

Knowledge

A high Knowledge indicates a character who is well-studied and keen-minded. You'll make a Knowledge check to recall lore, decipher code, or reconstruct a scene from clues.

Strength

A high Strength indicates a character who has physical prowess. You'll make a Strength check to break objects, lift or push heavy objects, or climb up cliffs.

Contested Checks

Sometimes, a **check** may be countered by an opposing force, which creates a **contested check**. Two warriors may grapple with each other in a contest of brute strength, and a thief may lie to a skeptical monk. In all cases, the opposing force must be consciously attempting to oppose it. If the character is not expecting it or can not react to it, then the **check** is made against a static **DC**.

The static **DC** is determined by the modifier that would have been used in a contested check: 10 + the appropriate modifier.

Succeeding a Check

Succeeding on a **check** means that your final value of your roll meets or exceeds the **DC**. This means that whatever your character was attempting to accomplish is successful.

Critical Success

A **critical success** is when you roll a 20 on your d20 before adding any modifiers. For nearly all **checks,** this means that you will immediately succeed. The exception is if the **GM** rules the **check** to be impossible for your character to beat, such as a warrior attempting to jump off a cliff and fly. In that case, the outcome of the check will reflect the best feasible outcome, such as a sudden wind pushing the warrior to safety.

When you roll a **critical success**, you immediately gain a **Miracle**, which will be described later in this section.

When you roll a **critical success** on an attack, you deal extra damage as described later in this section.

Failing a Check

Failing on a **check** means that your final value of your roll falls below the **DC**. This means that whatever your character was attempting to accomplish fails.

After a failure, the GM gains a **Doom**, which will be described later in this section, and may take the **Focus** to alter the environment.

Critical Failure

A **critical failure** is when you roll a 1 on your d20 before adding any modifiers. For nearly all **checks,** this means that you will immediately fail.

When you roll a **critical failure**, the GM immediately gains a **Doom** on top of the one gained by failing. The only exception is if the GM rolls a **critical failure**.

Advantage and Disadvantage

Sometimes a **check** is modified by special circumstances to create an advantage or disadvantage.

A **check** with advantage reflects that something has made your **check** significantly easier. You roll a

second d20 when you make the roll and take the higher of the two.

A **check** with disadvantage reflects that something has made your **check** significantly harder. You roll a second d20 when you make the roll and take the lower of the two.

Attacks

Whether by swinging a sword or shooting a beam of magic, most attempts to harm another creature require an **attack check**. All **attack checks** use a modifier, either the weapon's **attack trait** or your **spell/technique trait** if the **attack** is a spell or technique.
The DC of the **attack check** is always the targeted creature's **Evasion**.

Evasion

Evasion represents a character's ability to dodge and weave incoming danger. Your character's **Evasion** is determined by your Class, but it can be modified by techniques, spells, equipment, and more.

Damage

When you succeed on an attack check against an enemy, you will roll dice to determine how much damage your attack deals, and thus how many it Points your target loses.

Spell or Technique Damage Dice

If the attack is made by a spell or technique, the text tells you which damage dice you should roll.

Weapon Damage Dice

If the attack is made with a weapon, you roll your weapon's damage die and add the appropriate modifier to the total. You roll a number of weapon damage dice equal to half your **High Tier.**

Unarmed Damage Dice

When you make an **attack check** without a weapon, you may choose the primary trait to be Strength or Dexterity. It deals 1d6 + the chosen Primary Trait damage.

Critical Successes and Damage

If your attack roll is a **critical success**, your attack roll deals double damage! Make the damage roll as usual, adding all modifiers, and double the total.

Multiple Sources of Damage

If damage is dealt more than once to a creature during a character's **Action**, the damage is always totaled before the enemy loses Hit Points.

Distance, Range, and Movement

Journey's End is made to be playable with the theater of the mind, otherwise known as your imagination. However, using a map can be useful to better showcase an environment or clarify positioning.

Using a Map

Especially for combat, a map is useful to ensure everyone can see the same battlefield. It is recommended to use a square or hex grid to measure distances. Each grid space should represent roughly a 5 ft. diameter.

Range

Journey's End measures distance by a **range**. While these are not precise measurements, there is a quick guide for the GM to determine ranges and distances during play. Each type of **range** is a semi-abstract distance to aid with everyone's mental image.

- **Melee:** Within touching distance of the target, meaning about a few feet away from

a character.

- **Very Close:** Able to see the target in fine detail and easily able to enter **melee** range, meaning about 5-10 ft. away from a character.
- **Close:** Able to see the target in detail and can reach **melee** range within seconds, meaning about 10-30 ft. away from a character.
- **Far:** Able to see the creature but can't reach them without great speed, meaning about 30-100 ft. away from a character. Without any abilities, the GM might call for an **Agility check** to get within **melee** range of a **far** target.
- **Very Far**: So far that only the general shape can be seen, meaning about 100-300 ft. away from a character. Without any abilities, the GM might call for an **Agility check** to get within **melee** range of a **very far** target.
- **Out of Range:** So far that they may not even be visible anymore. Without first moving into a closer range, they usually can not be targeted.

Using Range

Range refers to an ability's maximum range. For instance, a spell with a range of **close** means it can target creatures within **melee, very close,** and **close range.**

Moving

When you take an **action,** you can easily move to a location within **close range** as part of the same **action.** To get farther, however, the GM may call for an **agility check** to get there in time.

Cover and Line of Sight

Almost all abilities that target a creature require line of sight. Without it, the creature can not be targeted, unless otherwise stated. Similarly, if the target is fully behind cover, such as a wall, then they also can not be targeted.

If the creature takes cover behind something that would not provide full protection, then attack rolls against them have disadvantage.

If the target is obscured by darkness, then the character does not have line of sight on them, unless they can see in the dark.

Concentration

Some spells and techniques require concentration on their effects to maintain, which is denoted on their cards. You lose concentration on any effects when you take **Major** damage or greater.

You can concentrate on multiple effects at once.

Core Resources

This section describes the core resources that all characters possess.

Hit Points and Damage Thresholds

Hit Points (HP) represent the physical and mental injuries your character experiences during their journey. The amount of **Hit Points** you have is determined by your class. When you take damage, you lose a number of Hit Points according to your **damage thresholds.**

Your **damage thresholds** are determined by your starting class, but can be modified by techniques, spells, equipment, and more. The threshold bar in your character sheet display the values for your **Minor**, **Moderate**, and **Major** thresholds.

Increasing Damage Thresholds

Oftentimes, abilities, armor, or other equipment will increase your damage thresholds using the following pattern: **+X/Y/Z**. Where X, Y, and Z represent bonuses to your **Minor**, **Moderate**, and **Major** damage thresholds, respectively.

Losing Hit Points

When your character takes damage, compare the damage total to your thresholds and mark a number of Hit Points determined by the threshold:

- **Minor damage** is anything above your **Minor** threshold but not above your **Moderate** threshold; you lose 1 HP.
- **Moderate damage** is anything above your **Moderate** threshold but not above your **Major** threshold; you lose 2 HP.
- **Major damage** is anything above your **Major** threshold but not above double your **Major** threshold; you lose 3 HP.

If you ever reduce incoming damage to 0 or less, you don't lose any Hit Points.

If you take damage that is greater than double your **Major** threshold, start with a value equal to your **Major** threshold. Keep doubling that value until it exceeds the damage taken. You lose an additional Hit Point for each time the value was doubled.

Regaining Hit Points

You usually regain Hit Points through **Resting** or a technique or spell that heals.

Stamina

Stamina represents physical and mental stress your character experiences during their journey. The amount of **Stamina** you have is determined by your class. Some of your abilities might require you to spend **Stamina** to use them. Additionally, the GM might offer you the chance to spend **Stamina** to succeed in a **check** that you failed or force you to spend **Stamina** as a consequence of a failed **check**.

Losing Stamina

When an effect requires you to spend **Stamina**, do so on your character sheet. When you spend your last **Stamina**, any further **Stamina** spent instead costs **Hit Points**.

Reducing Damage With Stamina

All characters can spend **Stamina** to reduce damage. When you take damage, you may spend 1 **Stamina** to reduce the damage by 1 damage threshold. You can only do this once per instance of damage.

Regaining Stamina

Like Hit Points, you usually regain **Stamina** through **Resting** or a technique or spell that invigorates.

Miracles

Miracles are a player-exclusive resource, representing how a twist of fate can massively benefit a character. All characters can only have 5 **Miracles** at once. If a character already has 5 **Miracles** and would gain another, they may immediately use the extra **Miracle** if they are able to, otherwise it is lost.

Gaining a Miracle

You usually gain a **Miracle** by rolling a **critical success** or taking the **Prepare** rest action. Additionally, the GM may grant your character a **Miracle** when you play well into your character's personality, do something extremely interesting, or give in to a drawback or flaw.

Using a Miracle

Every class has a feature that allows a character to utilize a **Miracle.** Otherwise, you can use a **Miracle** in any of the following ways:

Reroll a Check

You can use a **Miracle** to reroll your d20 on a **check**. You can also use this to allow an ally to reroll their **check** if you can feasibly support them.

When using a **Miracle** in this way, a **Miracle** can not be gained by rolling a **critical success** on the **check**.

In Place of Stamina

When an effect would require you to spend **Stamina**, instead use a **Miracle.**

Utilize a Miracle Feature

Some features require **Miracles** as a resource. Spend **Miracles** to utilize them.

Doom

Doom is a GM-exclusive resource, representing how a twist of fate can severely hinder the player characters. At the start of a journey or campaign, the GM gains an amount of **Doom** equal to the number of players. You can hold up to a maximum of 10 **Doom**. If you already have 10 **Doom** and would gain more, it is lost.

Gaining Doom

Whenever the players roll a **failure,** you gain **Doom.** If a player rolls a **critical failure**, you gain an additional **Doom**. You can also gain **Doom** from the players taking a **Rest**, certain player abilities, and enemy abilities.

Using Doom

When you use **Doom**, describe how fate changes to counter the players. What new effect or element works against their characters? You can spend **Doom** for any of the following effects:

Taking the Focus

You can spend **Doom** to take the **Focus** from a player after one of their **Actions** and take an **Action** yourself.

Apply Disadvantage on a Check

When a player is making a **check** and has not already spent a **Miracle** to gain advantage, you may spend **Doom** to grant disadvantage.

You do not gain **Doom** from a failure on the **check**.

Utilize an Environment's or an Enemy's Doom Feature

Many environments and enemies have specific **Doom** features that signify powerful effects. Spend **Doom** to utilize them.

Coin

Whether it be food, magical items, or a bed to sleep on, many goods and services require **coin** to purchase. There are no set prices for these goods and services, as it is up to the **GM** to determine their world's economy.

Coin is separated into three types: copper, silver, and gold. Going up in value in that order. Ten copper equals 1 silver, and ten silver equals one gold.

Skill Points

As mentioned in the **Creating a Character** section, you improve your character's abilities through **Skill Points.**

Acquiring Skill Points

You gain Skill Points by reaching certain milestones on your journey. Maybe you conquered a dangerous dungeon, reached a long-term goal of the party, or completed a quest.

The number of Skill Points you gain is up to the GM, but every person in the party should gain Skill Points at the same rate.

Death

All journeys must come to an end, and some characters meet an unfortunate one. However, the death of a character can be an exciting and emotional end to their story, as well as an opportunity for a player to try something new. When you lose all of your Hit Points, you immediately take a **death action**. A **death check** is a special check that has no associated **basic trait**.

Death Actions

When you would take a **death actions**, choose from the following:

Blaze of Glory

Your character accepts the end and goes out with a bang to aid their allies one last time. Take any **action** or describe how you sacrifice yourself. If the **action** would require a **check**, it is automatically a **critical success.** Afterwards, your character dies.

Cling to Life

In an effort to stay alive, your character allows themself to fall unconscious. Your character can not move or take the **Focus** while unconscious, they can't be targeted by an attack, and they return to consciousness when they regain Hit Points. When you regain consciousness, make a **death check**. On a **critical fail**, your character gains a **scar**.

Make a Stand

In the hopes of fighting your way out, your character pushes through the pain to stay on their feet. Until you regain Hit Points, if you would lose Hit Points, make a **death check**. If you would take Major or greater damage, roll with disadvantage. On a **critical fail**, your character dies.

Scars

There are consequences to avoiding the pull of death. If you choose to **Cling to Life,** there is a chance to take a **scar**. If you do, describe how your character is affected, visually (if it is a physical injury) and/or mentally. Regardless of what form the **scar** takes, you lose one of your **Miracle** slots when you gain one. **Scars** are permanent, but the GM may allow you to regain the lost **Miracle** slot as a **long-term project** or as a reward for an adventure focused on the **scar**.

If you ever lose all of your **Miracle** slots, your character's journey ends. While they do not necessarily die, they no longer have the motivation to continue adventuring and part ways with the party.

Resurrection

When a character dies, there is no defined way to get them back, as that form of magic is currently unknown.

However, the GM may choose to give the party a chance to revive a dead character. The path is often a long, difficult, and expensive process.

Equipment

This section describes the rules for equipment and items that characters can possess.

Using Equipment

You **equip** weapons and armor to your character by recording them on your character sheet in the **Weapons** and **Armor** sections. Your character only benefits from equipped items.

Some equipment have features, which is detailed in their statblock.

Equipping Weapons

You can equip up to two weapons at once. When you equip a weapon while already having two equipped, one must be sent back into your inventory.

When your character is in a dangerous situation, you can equip one weapon from your inventory as part of an **Action**.

Equipping Armor

You can only equip one set of armor at once. When you equip a set of armor while have another equipped, one must be sent back into your inventory.

You can't equip armor while in danger, instead needing a calm situation.

Using Weapons

You can make an **Attack check** with any weapons you have equipped, using its unique statistics to determine how the **Attack check** is made.

Weapon Statistics

Each weapon includes its name, trait, range, damage die, damage type, burden, and feature.

Name

The name of the weapon helps to identify its visuals and differentiate it from other weapons.

Trait

The trait tells you which **Basic Trait** is used when making an **Attack check**. You add your modifier of the **Basic Trait** to **Attack checks** and **damage rolls** of the weapon.

Range

The range tells you the maximum distance from which you can target a creature with the weapon.

Damage

The damage tells you what dice to roll and the type of damage you deal, physical and/or magical.

Your **High Tier** determines the number of damage you roll.

Burden

The burden indicates if the weapon is one-handed or two-handed. A two-handed weapon means that you can not equip a second weapon, unless stated otherwise.

Feature

The feature is a specific ability tied to the weapon. Most features can be triggered when you make an attack with the weapon, and can not be triggered when using a different weapon.

Using Armor

Armor usually has no defined actions related to it, but instead passively affects your character with its unique statistics.

Armor Statistics

Each set of armor includes its name, damage threshold bonus, and feature.

Name

The name of the armor helps identify its visuals and differentiate it from other armor.

Damage Threshold Bonus

The Damage Threshold Bonus represents how protective the armor is when you are wearing it. You add the Damage Threshold Bonus to your character's damage thresholds.

Feature

The feature is a specific ability tied to the armor. Most features are passives and often affect your character's Evasion.

Unarmored

Wearing no armor forgoes any damage threshold bonuses you would gain from wearing armor. However, you gain a +1 bonus to your Evasion.

Spells and Techniques

Spells and Techniques are special abilities that characters have, each having a specific use case and effect. Using **Spells** and **Techniques** costs **mana** and **stamina,** respectively.

Learning New Spells and Techniques

As described in the **Creating a Character** section, you can learn new spells and techniques by spending **Skill Points**. The cost of learning a specific Spell or Technique is noted in its description.

Inventing Spells and Techniques

Your character can create entirely new spells and techniques that do not already exist or change the function of an existing spell to fulfill a new use. When you do so, work with the GM to determine the exact effects of the new spell or technique, its **Augment Effects**, and the cost of learning it.

The GM may rule that your character must spend time as a **Long-term Project** to invent the spell or technique.

Improving Spells and Techniques

As described in the **Creating a Character** section, you can upgrade spells and techniques by spending **Skill Points**. The cost of improving a specific Spell or Technique is equal to its **Tier**. The **Tier** of a spell or technique increases when you improve it.

Using Spells and Techniques

Spells and Techniques are **Actions** that always cost **mana** and **stamina,** respectively. The amount of **mana** or **stamina** needed is noted in its description.

Augmenting Spells and Techniques

Augmenting is when your character pours additional resources into a spell or technique to improve its effects.

Augment Effects are specific aspects of a spell or technique that can be **augmented**, usually the number of targets or damage. These are highlighted in their description.

For every additional point of **mana** or **stamina** you use on the spell or technique, you can choose a specific **Augment Effect** and double it. You can choose the same **Augment Effect** multiple times, but it only increases the multiplier instead of doubling again.

For specifically **augmenting** a range or area of effect, the range or area of effect is increased by 1 Tier for each time you **augment** it.

You can only **augment** a spell or technique a number of times equal to its **Tier**.

Augmenting Example

Requiem is casting *Zoltraak* against a large crowd of enemies surrounding her. Her *Zoltraak* is currently a **Tier 2** spell, so she expends the **mana** cost and uses two additional **mana** to augment *Zoltraak's* target count twice. Requiem wants to **augment** more, but she is limited by the spell's **Tier**. *Zoltraak* originally only has one target, so this allows her to target three enemies at once with this spell.

Nashir is using *Shockwave* to push enemies off a cliff. His *Shockwave* is currently a **Tier 4** technique, so he expends the **Stamina** cost and uses three additional **Stamina** to augment *Shockwave's* area effect once, and the damage twice. Nashir is

running low of **stamina**, so he doesn't **augment** his technique to the maximum, and splits the **augments** to round out the technique.

Activated Spells and Techniques

An activated spell or technique is one that you have prepared in your mind and body, ready to use at a moment's notice. A deactivated spell or technique can not be used until it is activated.

You can have a limited number of Spells and Techniques activated at any one time. Your maximum number of active Spells and Techniques is equal to: **3 + your total Class Tiers**

Spells and Techniques share this limit. Any combination of active Spells and Techniques is allowed, provided their combined total does not exceed your maximum.

Activating Spells and Techniques

You may activate a Spell or Technique by taking a Rest Action. Certain features, abilities, or items may allow you to activate them in other ways.

Deactivating Spells and Techniques

If activating a Spell or Technique would cause you to exceed your maximum number of active Spells and Techniques, you must immediately choose one of your currently active Spells or Techniques and deactivate it.

Companions

Some abilities, spells, or techniques may summon or give you control over another creature as a **Companion**. **Companions** are often magical constructs or creatures that are either compelled or willing to follow your orders.

Command

You may issue a command to a **Companion** to make them take an **Action**. You can issue commands to multiple **Companions** at once, but doing so requires a **Primary Trait check** determined by your **Command Difficulty**.

You may only command a number of **Companions** equal to your **Primary Trait** at once.

Command Difficulty

Each **Companion** has a **Difficulty**. When you command more than one **Companion** at the same time, the **Command Difficulty** equals 8 + the combined **Difficulties** of all **Companions** being commanded.

Resting

Journeys are long and often arduous, forcing your characters to frequently expend their resources to stay alive or further their goals. When the characters decide to have downtime, they choose between a **short rest** and a **long rest**, and then choose two **Rest Actions** to take.

While **Resting** is a time for characters to recover from the events of the day, it is also an important opportunity for them to have important scenes with each other. It is a time to learn more about their party, share a meal around the fire, or seek out a quiet moment with another.

Short Rest

A **short rest** is when the characters stop to catch their breath, taking a break for about an hour. Each player chooses two of the following **Rest Actions** (or the same **Rest Action** twice):

- **Tend to Wounds:** You patch up yours or an ally's wounds, regaining a number of **Hit Points** equal to 1d4 + your Hit Point's **Tier**.
- **Relax Your Body:** You allow yourself to relax and recuperate, regaining a number of **Stamina** equal to 1d4 + your Stamina's **Tier**.
- **Restore Your Mana:** Meditate on your magic, regaining a number of **Mana** equal to 1d4 + your Mana's **Tier.**
- **Activate Abilities:** You look over your spells and techniques, activating up to 2 of them.
- **Prepare:** You and another ally prepare yourselves for the journey ahead, both gaining a **Miracle**. Both you and your ally must take the **Prepare** action.

You can only take two **short rests** before your next rest must be a **long rest.** If your party is interrupted during a **short rest**, you do not gain its benefits.

Long Rest

A **long rest** is when the characters wind down for the day, sleeping and relaxing for about eight hours. Each player chooses two of the following moves (or the same move twice):

- **Tend to Wounds:** You patch up yours or an ally's wounds, regaining all of your lost Hit Points.
- **Relax Your Body:** You allow yourself to relax and recuperate, regaining all of your expended Stamina.
- **Restore Your Mana:** Meditate on your magic, regaining all of your expended Mana.
- **Spend Skill Points:** Train and study to improve your abilities, spending any **Skill Points** you have accumulated so far.
- **Prepare:** You and another ally prepare yourselves for the journey ahead, both gaining a **Miracle**.
- **Activate Abilities:** You look over your spells and techniques, activating any number of them, up to your maximum. Both you and your ally must take the **Prepare** action.
- **Work on a Project:** Establish or continue work on a project (see the following "Long Term Project" section).

If your party is interrupted during a **long rest**, you only gain the benefits of a **short rest**, even if it is your third **short rest** in a row.

Long Term Project

Long Term Projects are activities that a player wants to pursue that would take a substantial amount of time. This could involve deciphering a coded message, crafting a weapon or magic item, or something similar. Each project usually involves a progress counter, allowing the player and GM to keep track of how close they are to completion.

Each time a character takes the **Work on a Project Rest Action**, they either automatically increase their counter or the GM may ask for a **check** to gauge their progress.

Consequences of Resting

While your characters are taking downtime to recover, the world continues, and your adversaries move against you!

On a **short rest**, the GM gains 1d4 **Doom**. On a **long rest**, they gain 1d4 + the number of players **Doom**, and may influence the world. They may describe a scene from outside the perspective of your characters or quietly change the circumstances.

Conditions

Conditions are effects that alter a creature's capabilities in a variety of ways, usually caused by a spell, technique, or extraneous circumstances. Conditions can be positive or negative, and sometimes both at once.

If the same Condition is applied by multiple sources, it does not stack its effects unless stated otherwise.

Clearing Conditions

Almost all Conditions are temporary, unless they are specifically denoted as permanent. A player character afflicted with a Condition can end it by making a **Basic Trait check** with a **DC** determined by the GM. You and the GM work together to describe how you attempt to and either fail or succeed at removing your Condition.

Multiple Conditions can be removed at once through a **check**, so long as it makes sense. However, the GM may adjust the **DC** accordingly to how many Conditions you are attempting to clear.

An NPC or enemy afflicted with a Condition can be ended as a GM Action, which does not require a **check**, but does usually mark the end of that creature's turn.

Additional Rules

Other rules to the game that don't fit in one of the other categories.

Rounding

If you ever need to round to the nearest whole number, round up unless otherwise specified.

Rerolling Dice

If you are ever allowed to reroll a die, you always take the new result, unless stated otherwise.

Simultaneous Effects

There is no order to how different effects should interact. The person causing or initiating the effects chooses which order they are applied. For instance, if you have a class feature that allows you to gain a **Miracle** on your first successful attack and another class feature that lets you deal additional damage by spending a **Miracle**, you could gain the **Miracle** first and then immediately spend it.

However, if you want to apply two or more effects, they must not contradict each other in the end. For example, if you regain **Stamina** when you **critically fail,** and you are also able to turn a **critical failure** into just a normal failure, you can not regain **Stamina** and then negate the **critical failure**.

Affecting a Roll

Some features allow you to change the result of a roll after it has been totaled, such a using a **Miracle** to gain advantage on a **check**. In these cases, the feature can be used after knowing success or failure, but before another **Action** or dice roll is made.

Duration of Effects

If a feature, ability, or effect does not specifically denote how long it lasts, then by default it should end when the scene it started in ends.

If a scene takes place for a very long time, then the GM may call for the effect to end during the scene.

Running Journey's End

Running Journey's End

In this section, you'll learn how to run a session of Journey's End and also receive guidance for certain scenarios.

This section will be far less focused on exact rulings and mechanics, since part of being a GM means making choices on the spot!

Starting a Journey

The Journey, aka the Campaign, is the overall story that the player characters live and fight through. Imagine it as the narrative of a movie or a novel. The Journey has a beginning and an end, and should encompass all of a character's development within it. When starting the Journey with your players, there is a checklist that needs to be completed before you start playing:

- Determining the Setting
- Writing the Premise
- Character Creation
- Session 0

Determining the Setting

The Setting of the Journey is the world in which your story will take place. You can take the world from existing media, like the continent from **Frieren: Beyond Journey's End**, or create your own world.

If you choose to create your own world, you will need to begin by determining what kind of world it is:

- **Time Period:** Is it Medieval? Renaissance? Modern?
- **Fantasy:** How abundant are fantastical or supernatural elements? Does magic flow through everything, or is it rare?
- **Gods and Spirits:** Are there gods? In **Frieren: Beyond Journey's End**, there is only the Goddess of Creation, but even she isn't a confirmed entity. Your world may have many gods that the priests pray to, or none at all.

Now that you have the base level details, the rest of the world is done through more in-depth worldbuilding. You don't need to have every part of the world populated with rich lore, especially since the players will likely not see everything immediately. You can write details for locations, people, and objects that you know will be important to the Journey itself.

Writing the Premise

The premise of the Journey is the basic information and narrative to set up the beginning of the story. Imagine it as the synopsis or "trailer" for the Journey. It should give some details of the setting, where the players may be exploring, and what levels of danger they may be facing. It is also here where the players should be made known of certain details like how roleplay focused the campaign is, how much combat they should expect to face, and how large mystery plays into the story.

Character Creation

Now with the setting and the premise, the players can begin creating their characters! They should coordinate with each other to choose classes and abilities so that the party achieves a balance (it is always recommended to have someone who can heal).

Your role during this portion is to answer the many questions your players will likely have about the world and how their characters fit in it. When they write their backstories, you may supply locations and towns they can be from, or allow them to build parts of the world themselves.

Session 0

Session 0 occurs after the setting and premise have been written, and all players have created their characters. Now, gather to finalize details, ensure that everyone has set up their character correctly, and introduce each character to the group. Play doesn't necessarily begin here, but if your players are eager to jump in, you may have a short section of gameplay to gather the party and set up their very first quest.

Running a Session

A Journey is separated into Sessions, which is any arbitrary stretch of time where you and your players have gathered to play. During a session, you and the players advance the story towards a goal, both short and long term. An entire session may be dedicated to a single quest, travelling to a far-away settlement, fighting foes, or a combination of many things.

Your role is to make sure the story progresses and make sure the players have enough information to continue. If the players ever get "stuck" and don't know where to go or what to do, that signals to you that you should give them more clues or introduce a NPC who can help them.

Most Sessions have a defined amount of time they take up in real life. As the GM, you should probably try to find a natural stopping point in the Session so that the players do not feel arbitrarily cut off from gameplay. At the same time, you should also not go on for too long to be respectful to the schedule your group had set. Good stopping points could be: After a combat, right before a combat, when the party stops to rest, when a major piece of lore is revealed, entering a new area, and setting out to travel.

More information on what you can do during a Session will be detailed in **GM Mechanics**.

Writing a Journey

How to write a Journey is an extremely subjective topic. There are an infinite possibilities on how to start, continue, and end the Journey. What is important is that your player's have some idea of the structure, not intimate details, but just the structure so that they aren't blindsided by a genre they were not expected.

If you are writing a heroic Journey where the player characters save or massively aid the world, then the Hero's Journey story structure is a good structure to use. Depending on the kind of story you want to tell, you can borrow story structures of existing literature.

Ending a Journey

The end of a Journey is often a grand moment, bittersweet as your group bids farewell to the characters they have played as, talked to, and fought with for a long time. When your group ends a Journey, time and Focus should be given to each character to describe how their life goes on after the story. Do they settle down? Keep adventuring? How do they make a living after the excitement of the Journey?

When the curtains draw for the final time of this Journey, it is finally laid to rest and should your group decide to, you may start looking forward to the next Journey.

GM Mechanics

The following sections are mechanics and rules specifically for you, the GM. These are also more specific pieces of advice on how to operate certain parts of Journey's End during a session.

GM Checks and Actions

Actions for you function exactly the same as any player character, except you will be making them for many different characters across a journey.

Calling for Checks

When a player describes an actions or move they want to make during the game, assess whether or not there is a degree of difficulty to what they want to accomplish. If they are using a feature, making an attack, casting a spell, or using a technique, then it will say in the description if a check is needed.

If you determined there is difficulty to their Action, then assess exactly how difficult the Action is. This process relies on a lot of factors, but you can base the DC using the following guide:

Difficulty Level	DC
5	Easy
10	Average
15	Hard
20	Very Hard
25	Nearly Impossible

The difficulty you choose does not have to be in multiples of 5, as you can place the DC somewhere in between. Also, you, as the GM, can choose whether to reveal the DC before the players roll, after, or to keep it secret.

Guaranteeing a Check

Sometimes, the players really need to succeed on a check. Or, their roll is so close that it is soul-crushing to fail it. When this happens, you may offer them a choice to succeed instead of failing in exchange for one of the following:

- Spending **Stamina**
- Spending a **Miracle**
- Losing **Hit Points**
- Giving you **Doom**

You could also establish other penalties for guaranteeing the check depending on the context of the current scene. Maybe they drop a fragile item they're holding, or an enemy they're grappling with breaks free?

Granting Advantage and Disadvantage

Without the players spending a **Miracle**, using abilities, or you spending **Doom**, almost all **Checks** will be made "straight," or without advantage or disadvantage. However, you can occasionally grant either if you deem it appropriate to the narrative.

Maybe the player is trying to make an **Agility check** through deep snow that would hinder their movement. A guard that they already tried to trick is now much less likely to believe any **Charisma checks**.

You might be wondering why not just increase the **DC** of the **check**? You certainly can, but the **DC** can often make **checks** feel ridiculously easy or difficult, whereas advantage and disadvantage give players a more tangible feeling of how the stakes change.

GM Actions

As described in the **Rules of Play** section, you will often take the **Focus** from the players in order to advance the world, environment, and adversaries to the party. When you do so, it is important to know what to do with the **Focus**.

Choosing a GM Move

Most of your GM moves will depend on what the players had just done before. If a check is involved, you can use their success or failure to determine how the situation unfolds.

Players rolled a Success

When the players rolled a success, you usually take **Focus** to describe how the players advance in their goals. Sometimes, however, you'll spend **Doom** immediately to introduce a new complication. When that happens, you should describe how the success of the players might have forced the hand of whatever they are facing right now. Perhaps the villain was underestimating them before and is now fighting more seriously, or the corrupt noble the party is investigating begins to panic as they get closer to finding the evidence.

What is important is to make sure NOT to undermine their success. Did a player just manage to knock an enemy off their feet? Maybe have the enemy try to drag the player down with them instead of having them just stand up without any consequences. That isn't to say you should never immediately reverse an effect, but those moments should be reserved for powerful adversaries to show how dire the situation is.

Players rolled a Failure

When the players rolled a failure, you usually take the **Focus** to describe how the players failed to advance in their goals. Sometimes, you might also spend **Doom** to further complicate their objective.

It is important that you always keep the story moving. If they fail to lockpick a door, don't stop at just saying that they failed! A guard might walk out that very door to catch them! Especially if you spend **Doom**, the story should advance to another event, just one that is unfavorable for the players.

Enemy Actions

When you take the Focus in combat, you'll almost always use it to make an enemy attack the players. All enemies have a standard attack, shown on their statblock, which can target a single player by default.

You make attacks and actions the exact same as a player would given those abilities.

Doom

How you gain **Doom** and use it was already described in the **Rules of Play** section, so it won't be reiterated here. Rather, this will be advice on how often and in what ways you should be using it.

Tracking Doom

You should always keep track of how much **Doom** you have at once. You can do so by keeping coins as "tokens", tracking the number using a digital counter, or using a d10 dice.

Spending Doom

You should be spending **Doom** whenever you feel the situation calls for it. Have the players been succeeding many time in a row? Complicate the situation with **Doom.** Have the players failed at a critical moment? Show just how dire the consequences are by spending a couple **Doom**.

It is good to avoid hoarding **Doom** and then spending it all in one place. The back and forth of players utilizing their abilities and **Miracles** with your **Doom** often creates dynamic scenes. It will be much more satisfying for you and the players when their characters achieve a hard-earned victory or suffer a grave defeat.

How Much Doom Should I Spend?

Like many things in this section, this is a subjective question. However, the difficulty of a scenario directly scales with the amount of **Doom** you intend to spend on it. Thus, the following is a rough guide on how much **Doom** should be spent on a given encounter:

Type	**Description**	**# of Doom**
Trivial	A peaceful scene that is very unlikely to involve anything of high stakes, such as travel, shopping, or a conversation between friends.	0-2
Standard	A scene that involves tension with a notable objective, such as an ambush, investigation, or social situation	1-3
Difficult	A dire scene against a major opponent or obstacle, such as a large fight or a character-defining moment.	4-6
Deadly	A climactic confrontation with a villain of the Journey, such as a boss fight or determining the fate of a character.	7-10

Doom Surplus

If you have a lot of **Doom** and are having trouble figuring out what to do with it, here are some possible uses:

- Introduce a New Enemy
- Place a New Obstacle in the Player's Path
- Act First in Combat
- Trigger a Sudden Environmental Change
- Influence the World in a Major Way

You can always improvise **Doom Actions** in order to make an encounter or combat more interesting. Maybe the floor suddenly caves in or a pillar in the dungeon crumbles onto the players' heads.

Progress Counters

A Progress Counter is a way to track progress towards events, consequences, or goals. Some enemy statblocks or encounters may explicitly call for a Progress Counter, but you may introduce them for a multitude of reasons.

Progress Die

To represent a Progress Counter, you can often use a die, with a 1 being the beginning and the highest value of the die being the culmination of the Progress Counter. This way, not only can you track it, but the players can also see how far along the Progress Counter has progressed.

The exact die you use is dependent on how long you want the Progress Counter to take. However, it is recommended to only use d12s or smaller dice.

Advancing a Progress Counter

You can set the exact trigger to advance a Progress Counter, though it is recommended to tell the players exactly what that trigger is. Usual triggers include:

- Players taking an **Action**
- Players rolling a Success/Failure on a **check**
- Players making steps to solve a puzzle
- Players defeating an enemy
- Players taking a rest
- You spend **Doom**

Note how almost all of these triggers are directly related to how the players act and behave.

Coin, Equipment, and Loot

Most adventurers rely on coin and their equipment in order to survive the Journey. The players may rob coin from a corrupt noble, or the enemies they defeated may have an interesting item.

Distributing Coin

Whenever you give out coin to the players, it is usually a good idea to give an equal amount of coin to each player character, so that everyone has around equal spending power. Of course, if a player negotiates for a higher pay for themselves, or takes on a job by themselves, they then get additional coin.

At character creation, you determine how much coin players get. A good default, however, is 10 gold.

Distributing Equipment

Usually, you give Equipment to players as a quest reward or for finding it in the world. Its difficult to give equal amounts of equipment to players everytime they do get Equipment.

At character creation, players choose from a list of starting equipment. If you choose so, you can also allow players to choose from a list of starting magical items.

Economy

The following tables is meant to provide an example economy for you to use. Don't be afraid to adjust any of these prices! If you don't want to place a strong emphasis on coin, you can always make some services cost trivial amounts of money.

Service/Good	**Coin Cost**
Warm meals for a party of adventurers	3 Silver
A drink	1 Copper
Cheap inn room per night	1 Silver
Standard inn rooms per night	3 Silver
Luxury inn rooms per night	1 Gold
Wagon ride to a nearby city/town	5 Silver
A Mount (horse, camel, etc.)	10 Gold
Fancy Clothing	3 Gold
Tier 1 Consumables	1 Silver-1 Gold
Tier 2 Consumables	1-5 Gold
Tier 3 Consumables	5-25 Gold
Tier 1 Equipment	1 Gold-5 Gold
Tier 2 Equipment	5-25 Gold
Tier 3 Equipment	25-100 Gold

General Guidance

Here you'll find general principles that you should follow when playing as the GM. While you shouldn't take everything said here as law, these are principles that have led to many great stories.

Being the GM

As the Game Master (GM), it is your responsibility to guide the narrative and playing as the world that your player's exist in. You are the blizzard freezing them, the merchant they are haggling with, and the villain fighting against them. Being the GM is one of the most exhilarating and fulfilling experiences, but it can also be the most daunting task for someone.

As a new GM, it is recommended to take things slowly and understand that you are probably learning multiple skills at once. Don't worry if you occasionally make mistakes or mess up! Everyone starts from as new and you will improve over time.

Magic is the Realm of Imagination

Remember this from the **Intro**? It also applies to how you can run the game. Journey's End is inherently a heroic high fantasy game, but if the rules of the game gets in the way of the narrative and what your players want to achieve, then you should bend the rules to allow it. Maybe a Mage can't **augment** their spell anymore, but this is a fight against their evil mentor. You may choose to allow the Mage to double the tier of their spells for this moment, and decide a consequence of pushing themselves later.

That does not mean you should always bend the rules. Otherwise, the rules no longer mean anything. Consistency within a game is important and exceptions to the rule should remain exceptions.

Rule Bending as a Mechanic

If you actually want players to be able to bend the rules more, you can choose to use this rule.

An additional way of using a **Miracle** is to accomplish something that would otherwise be impossible. You may augment a spell more than its Tier allows, or delay making a Death Action when you are reduced to 0 Hit Points. The scope of what can be done with this rule is up to the GM.

Begin and End with the Narrative

During all sections of gameplay, you should start with the narrative, describing the scene, before going to mechanics. When the mechanics are resolved, you should end by describing the consequences of the Actions taken.

Collaboration, Not Adversity

At all times, Journey's End is meant to be a collaboration between you and your players to tell a great story. Part of your job will be to play as the enemy and others who would oppose the player characters. However, it is critical to remember that the players are not your enemy. Their characters are the enemy to the villains of the story, but you as the GM are always on the sides of the players. That side being the one aiming to create a great story.

Part of the collaboration is to be a fan of the characters they play. You should be proud when they develop as a character, excited when they perform amazing feats, and sad when their journey meets its end. Your goal is never to absolutely crush the player characters or thrust them into an unwinnable situation. You should be

giving them a challenge that can be overcome, though perhaps with great difficulty.

Let Your Players Fill Your World

You don't have to create the lore for every nook and cranny of the world you play in. If a player character comes from a city in your world, let them take charge to build that environment. How they grew up and what they encountered can help fill your world and make it feel alive.

Involve the Backstories of Your Players

As the GM, you likely have the story you want to tell. The great villain who wants to change the world against the players's would-be heroes. However, you should make time to face the problems and questions the player character's have about their past. A way to do both is to connect a player character's backstory to the main story itself. Maybe the Warrior has a missing brother, and they find clues to their fate while being captured by a villain.

Enemies and Environments

Enemies and Environments

This section presents rules and stat blocks for enemies and environments

Enemies

Your players will come across those who would operate against their characters. While not all enemies will do that through direct combat, the following describes how to read an enemy's statblock.

Statblock Breakdown

A **statblock** is a visual/textual representation of an enemy's statistics, abilities, and even personality.

Name

Each statblock has a name, which could be a general name like "City Guard" or a specific character's name like "Larseo of Khare"

Tier

Each enemy is supposed to go up against a specific power level of players. A well-balanced encounter would be against enemies with a Tier equal to the average of Class Tiers amongst the players. While you can use statblocks from other Tiers, you may want to adjust the exact statistics.

Basic Traits

Most enemies have established Basic Traits to represent their abilities.

Variant: Basic Modifier

Some enemies, especially minions or less important creatures, may just have a Basic Modifier for them to add to any given check.

Evasion

All enemies have an Evasion to denote how difficult it is to attack them.

Damage Thresholds, Hit Points, Stamina, and Mana

All enemies have these traits to establish their limits and resources in combat. They function the same way as they do for players.

Attack Modifier

Combat-based enemies have an attack modifier to add to attacks.

Standard Attack

Combat-based enemies have a Standard Attack that contains its name, range, and the damage on a hit.

Experience

Some enemies may have Experiences that make them more capable. You can add an enemy's Experience to a **check** by spending **Doom**.

Features

Features represent an enemy's capabilities in conflict.

Environments

Environments have statblocks as a way to help you run certain encounters and areas. While optional, they can be very useful for planning and executing your ideas smoothly.

Statblock Breakdown

A **statblock** is a visual/textual representation of an environment's statistics, abilities, and even description.

Name

Each environment has a unique name that acts as a very short descriptor.

Tier

Like enemies, environments have a Tier to go up against a specific power level of player characters.

Description

A evocative but short snippet of the environment

Impulses

Short phrases that provides the themes and also potential problems that the players may be up against in the area.

Difficulty Class

Instead of basic traits, environments have a general **DC** that should be used for most checks being made in the area. You can adjust the **DC** as necessary if the player is attempting to accomplish something particularly easy or difficult for the environment

Potential Enemies

Many environments will have a list of enemies that you can use to establish conflict or consequences for the actions of the players.

Features

Like enemies, environment features are abilities and possible complications for you to use during the scene.

Index

Index

This section is a large index for lists of the following:

- Classes
- Conditions
- Races
- Equipment
- Enemies
- Environments

Classes

Classes

This section details each class. Your chosen class grants the following:

Class Traits

Class traits are improvable traits like **Hit Points, Stamina,** and **Mana**.

Starting Hit Points

Each class has its own starting Hit Points. Regardless of this value, it is a Tier 1 trait when you choose the class.

Starting Stamina

Each class has its own starting Stamina. Like Hit Points, it is a Tier 1 trait when you choose the class.

Starting Mana

If your class casts spells, it has a starting Mana. Like Hit Points, it is a Tier 1 trait when you choose the class.

Evasion

The value for your Evasion. Unlike Traits, Evasion does not have a Tier and thus is not improved by using Skill Points.

Damage Thresholds

The values for your **Minor, Moderate, and Major** damage thresholds. For all classes, the starting value for your **Minor** damage threshold is 0.

Tier 1 Class Feature

Each class has a unique class feature at Tier 1

Spell or Technique List

Each class has a specific list of spells or techniques to choose from.

Starting Equipment

Each class has a unique set of starting items.

Subclasses

Each class has two subclasses. Your chosen subclass grants the following:

Tier 1 Subclass Feature

Each subclass has a unique subclass feature at Tier 1

Primary Trait

Each subclass has a trait it uses any time a spell or technique calls for a **check**, otherwise known as a **Primary check**.

Hero

Heroes are those who stand up for their values with great courage. Often guided by an unwavering sense of justice, they are a class of charismatic individuals that serve as both agile fighters and moral support.

Tier	Features
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 3
Starting Stamina (Tier 1): 4

Evasion: 10

Damage Thresholds: 0 / 5 / 10

Starting Equipment

A Hero starts their journey with the following items:

- One two-handed weapon or 2 one-handed weapons
- One set of armor
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points) or a Basic Potion of Stamina (regain 1d4 Stamina)
- An heirloom or object that reminds you of home

Class Features

Helping Hand

Tier 1 Class Feature

You are always nearby, willing to aid your allies. When an ally is in Very Close range and fails a check, you can spend 1 Stamina to add a d6 to their roll. Describe how you help them with their check.

Close Call

Tier 2 Class Feature

Just when your enemies think they have you, you slip through their aggression. Once per session, when an enemy succeeds on an Attack check against you, spend 1 Miracle to avoid the attack.

Inspiring

A beacon of hope or triumph to those who see you, you excel at bringing out the best in others

Primary Trait: Charisma

Inspiration

Tier 1 Subclass Feature

Once per session, spend 3 Stamina and describe how you rally your party to face the odds with renewed fervor. All of your allies who witness you gain a **Miracle**.

Stay With Me

Tier 3 Subclass Feature

Your presence gives your allies greater conviction to stay alive. When an ally within Close range would make a Death Action, spend 1 Miracle to let them regain 1 Hit Point.

Paragon

An agile warrior feared by those who stand against your values, you strike faster than the eye can see.

Primary Trait: Agility

Repetition

Tier 1 Subclass Feature

When you make an attack, you can spend 3 Stamina to make a number of additional attacks equal to your Hero **Tier**.

Dash

Tier 3 Subclass Feature

Your body is honed for agile movements. When you make an Agility check to move far distances, double your Agility modifier added to the check.

Mage

Mages study for years to develop their mana to cast spells. While their strength lies in training and inner nature, it all hinges on their ability to visualize the cause and effects of the spell. Mages are often educated individuals who offer both utility and raw power.

Tier	Features
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 3
Starting Stamina (Tier 1): 2
Starting Mana (Tier 1): 4

Evasion: 6

Damage Thresholds: 0 / 3 / 6

Starting Equipment

A Mage starts their journey with the following items:

- One magic focus
- One one-handed weapon
- One set of armor
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points) or a Basic Potion of Mana (regain 1d4 Mana)
- Notes on a theoretical spell from your master, left for you to now complete.

Class Features

Visualization

Tier 1 Class Feature

In order to cast your spells, you must first visualize exactly what you wish to happen. When a spell has you make a **check**, you may spend 1 Stamina to gain advantage on the **check**.

Focused Mind

Tier 2 Class Feature

You can hold onto concentration with intense focus. Once per session, when you would lose concentration on a spell, you may spend 1 Miracle to maintain concentration on the effect.

Studied

One who has dedicated many hours to learning and understanding magic, you have a vast amount of spells at your disposal.

Primary Trait: Knowledge

Deep Learner

Tier 1 Subclass Feature

When you study spells to learn them, you pave the way for the next spell in your path. Whenever you spend **Skill Points** to learn a new spell, you gain **Spell Skill Points** equal to the spell's Tier Requirement. You can spend **Spell Skill Points** to learn spells.

I Know a Tome

Tier 3 Subclass Feature

With your time spent studying, you have gathered libraries' worth of niche knowledge. When you make a Knowledge check, recall lore about magic or the arcane, you may spend a Miracle to triple your Knowledge modifier added to the check.

Instinctual

One who has focused entirely on the visualization of your magic, you have a talent for augmenting spells.

Primary Trait: Instinct

Augmenting Adept

Tier 1 Subclass Feature

You have an easier time augmenting your spells. When you spend Mana to augment a spell, you may augment it an additional time.

To The Limit

Tier 3 Subclass Feature

You can push your spells to the limit in a pinch. Once per session, you can spend a Miracle when casting a spell to augment it as many times as possible without spending additional Mana.

Monk

Monks are disciplined in both body and mind. Often pious towards the Goddess of Creation, they undergo harsh training to survive on little and rely only on their bodies to defend themselves. They are a self-reliant class with very few direct weaknesses.

Tier	Features
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 4
Starting Stamina (Tier 1): 5

Evasion: 9

Damage Thresholds: 0 / 4 / 8

Starting Equipment

A Monk starts their journey with the following items:

- One two-handed weapon or 2 one-handed weapons
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points) or a Basic Potion of Stamina (regain 1d4 Stamina)
- A martial manual or a book of poetry

Class Features

Unarmored Defense

Tier 1 Class Feature

Your body and limbs are conditioned to withstand blows and magic. You gain a +1/2/4 bonus to your damage thresholds while you are not wearing armor.

Humble Living

Tier 2 Class Feature

You have learned to live on very little. Once per session, you may spend a Miracle to regain a number of **Hit Points** and **Stamina** equal to your Monk **Tier**.

Wise

You have learned more than a few hard lessons in your life, allowing you to guide others on their journey.

Primary Trait: Instinct

Words of Wisdom

Tier 1 Subclass Feature

When you take a short or long rest, share a story related to one of your **Experiences** with your allies. Each character that hears the story can use that **Experience** as if it were their own.

Exposing Strike

Tier 3 Subclass Feature

You know just how to open up your foes. When you succeed on an attack, you may spend a **Miracle** to **Expose** them. While **Exposed**, the target can not reduce damage thresholds.

Martial

You have learned to wield discipline through physical force, using your own body to strike back at those who would do you harm.

Primary Trait: Dexterity

Martial Prowess

Tier 1 Subclass Feature

When you make a damage roll with a weapon or your body, the minimum damage die you roll is a d8.

Dazing Strike

Tier 3 Subclass Feature

Your attacks are mighty, capable of winding any foe. When you succeed on an attack, you may spend a **Miracle** to **Daze** them and force them to lose 1 **Stamina**. While **Dazed,** the GM can not activate them until the GM spends a **Doom** to end the condition.

Priest

Priests are holy spellcasters born with the gift to wield the Magic of the Goddess. Often becoming a member of the clergy, they focus on supporting their allies through healing and buffs. However, they are still very capable of doing harm.

Tier	**Features**
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 3
Starting Stamina (Tier 1): 3
Starting Mana (Tier 1): 3

Evasion: 6

Damage Thresholds: 0 / 4 / 8

Starting Equipment

A Priest starts their journey with the following items:

- One two-handed weapon or one one-handed weapon
- One set of armor
- Holy scripture
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points) or a Basic Potion of Mana (regain 1d4 Mana)
- A priest's emblem or amulet, given to you by your church or mentor.

Class Features

Bless

Tier 1 Class Feature

As a priest, you can confer blessings on your allies. At the start of a session, you have a number of **Blessings** equal to **Primary Trait**. When an ally in the same scene makes a **check**, you can spend a **Blessing** to add your **Primary Trait** modifier to the roll.

Bestow Miracle

Tier 2 Class Feature

Your **Blessings** can lead to amazing outcomes. If an ally has no **Miracles**, you may spend a **Blessing** to grant them one. This **Miracle** is lost if unspent by the end of the session.

Healer

Your talents have led you to excel at alleviating injuries and ailments from others, making sure everyone stays alive on their journey.

Primary Trait: Knowledge

Healing Touch

Tier 1 Subclass Feature

You can heal with a touch. Spend a **Blessing** to allow an ally within **Melee** range to regain 1d4 Hit Points.

Medic

Tier 3 Subclass Feature

Once per session, when you take the **Tend to Wounds** rest action, you may heal yourself and all allies resting with you. Describe how you patch everyone up.

Enchanter

Your talents focus on bolstering those around you, ensuring that they fight stronger than ever.

Primary Trait: Knowledge

Invigorating Touch

Tier 1 Subclass Feature

You can invigorate with a touch. Spend a **Blessing** to allow an ally within **Melee** range to regain 1d4 Stamina or 1d4 Mana.

Oomph

Tier 3 Subclass Feature

When you cast a spell that targets an ally, spend a **Miracle** to let them add your Priest Tier to their damage rolls.

Thief

Thieves are sneaky individuals who exploit weaknesses and tend to avoid direct confrontation. Their strength lies in their cunning and resourcefulness, finding ways to escape from any bad situation.

Tier	Features
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 4
Starting Stamina (Tier 1): 4

Evasion: 11

Damage Thresholds: 0 / 4 / 8

Starting Equipment

A Thief starts their journey with the following items:

- Two one-handed weapons
- One set of armor
- A set of lockpicks
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points), a Basic Potion of Stamina (regain 1d4 Stamina), or a Basic Poison (inflicts 1 Poisoned)
- A stolen item from your first score or job

Class Features

Sneak Attack

Tier 1 Class Feature

You excel at exploiting weaknesses in your enemies. When you succeed on an attack with advantage or while an ally is within **Melee** range of the target, add a number of d6s equal to your Thief Tier to the damage roll.

Hidden in Plain Sight

Tier 2 Class Feature

If you succeed an **Attack Action** against an enemy while **Hidden**, you may spend a **Miracle** to avoid losing the condition.

Delver

Your time robbing homes or plundering dungeons has honed your senses and movement, helping you to slip past defenses and detect traps.

Primary Trait: Dexterity

Careful Step

Tier 1 Subclass Feature

You're accustomed to moving around unnoticed. While **Hidden**, you may make a Primary Trait **check** to remain **Hidden** if you or an enemy moves into a space where they would normally spot you.

Danger Sense

Tier 3 Subclass Feature

No trap or ambush can escape your notice. You can spend a **Miracle** to detect the presence of traps or **Hidden** enemies in the area.

Connected

Your time interacting with others has built a large web of contacts, allowing you to call on their aid when necessary.

Primary Trait: Charisma

I Know Someone

Tier 1 Subclass Feature

When you arrive in a new town or environment, you have a connection to someone who lives here. Describe this person, give them a name, and how they could be of use. Then, choose one of the following:

- They're a shrewd person, always asking for something in return.
- They owe me a favor, but they're wanted here.
- They always scam me.
- We used to be great friends but things got messy between us.
- We used to be a couple.

Thief's Cache

Tier 3 Subclass Feature

Once per session, you can spend a **Miracle** to find a nearby cache of supplies that you or your connections hid for emergencies. Choose a number of the following items equal to your Thief Tier to be in the cache:

- A Basic Potion of Healing
- A Basic Potion of Stamina
- A Basic Potion of Mana
- 10 silver
- 50 ft. of rope
- A disguise
- A set of tools
- A forged identity for yourself or a member of your party
- A map of the region or town

You may select the same item more than once, and the GM may allow any mundane item to be in the cache.

Warrior

Warriors are trained fighters who specialize in close-quarters combat and defensive maneuvers. They are able to perform superhuman displays of strength and resilience, allowing them to serve as frontliners to their allies.

Tier	Features
1	Helping Hand, Tier 1 Subclass Feature
2	Tier 2 Class Feature
3	Tier 3 Subclass Feature
4	Tier 4 Class Feature
5	Tier 5 Subclass Feature
6	Tier 6 Class Feature
7	Tier 7 Subclass Feature
8	Tier 8 Class Feature
9	Tier 9 Subclass Feature

Class Traits

Starting Hit Points (Tier 1): 5
Starting Stamina (Tier 1): 4

Evasion: 7

Damage Thresholds: 0 / 7 / 14

Starting Equipment

A Warrior starts their journey with the following items:

- One two-handed weapon or 2 one-handed weapons
- One shield
- One set of armor
- A torch
- 50 ft. of rope
- A Basic Potion of Healing (regain 1d4 Hit Points) or a Basic Potion of Stamina (regain 1d4 Stamina)
- A weapon part from your master.

Class Features

Grit

Tier 1 Class Feature

Part of your training is withstanding and dealing pain. At the start of a session, you have a number of **Grit** equal to your Primary Trait modifier. When you make a **check** using your Primary Trait, you may spend a **Grit** to add a d8 to the **check**.

Opportunity

Tier 2 Class Feature

You can react to enemies that attempt to escape your grasp. If an enemy within Melee range moves away from you, spend a **Miracle** to inflict one of the following effects.

- They are **Restrained** by you and can not move.
- They are **Exposed** by you.
- You deal damage to them with one of your equipped weapons.
- You move along with them.

Tough

You are trained to resist all threats, physical or magical, so that you may take the pain that others can not.

Primary Trait: Strength

Withstand

Tier 1 Subclass Feature

No pain is too great. When you take damage, spend a **Grit** to reduce it by one threshold.

Retaliate

Tier 3 Subclass Feature

Strike back at your enemy. Your **Opportunity** feature may now be triggered when an enemy within **Melee** range deals damage to you.

Brutal

You are trained to inflict unbelievable damage upon your targets, slaying them before they can do the same to you.

Primary Trait: Strength

Eviscerate

Tier 1 Subclass Feature

None can resist your offense. When you succeed an **Attack Action**, spend a **Grit** to roll an additional damage die.

Onslaught

Tier 3 Subclass Feature

Strike while they are weak. Your **Opportunity** feature may now be triggered when you succeed an **Attack Action** against an enemy within **Melee** range.

Spells and Techniques

This section details each spell and technique. Each spell and technique has the following.

Class Requirement

Each spell and technique is available for a unique class.

Tier Requirement

Each spell and technique has a **Tier Requirement** based on its **Class Requirement**. For instance, a **Priest** spell with a Tier 2 requirement can only be taken if you are a Tier 2 Priest.

Learn Cost

Each spell and technique costs **Skill Points** in order to learn.

Use Cost

Each spell and technique cost resources to use. Spells use **Mana** and techniques use **Stamina**.

Tier

The Tier of the spell or technique denotes how much you can augment it when you use it.

Description

The description for the effect of the spell or technique. Sections written in **Bold** denote **Augment Effects.**

Tier 1 Spells

Zoltraak

Killing Spell

Available For: Mage

TR: 1	**Use:** 1 Mana	**Learn:** 2 Skill Point

Fire a concentrated beam of deadly mana. Make a Primary Trait Attack against **1** target in **Far** range. On a success, deal **1d10 + 5** magic damage to the target.

Tier I

Verteid

Defense Spell

Available For: Mage

TR: 1	**Use:** 1 Mana	**Learn:** 2 Skill Point

Conjure a shield of mana to defend yourself from physical and magical damage. When you take damage, cast this spell to gain a **+4/8/16** bonus to your damage thresholds.

Tier I

Blume

Flower Spell

Available For: Mage

TR: 1	**Use:** 1 Mana	**Learn:** 1 Skill Point

Cause a field of flowers to grow around you. Any fertile ground within **Very Close** range immediately grows and blooms flowers of a species you have seen before.

Tier I

Jagd

Tracking Spell

Available For: Mage

TR: 1	**Use:** 1 Mana (Concentration)	**Learn:** 1 Skill Point

Track down a creature. Make a Primary Trait check on tracks or clues left behind by a creature. On a success, their tracks begin to glow and lead you to the creature. The spell fails if the tracks are older than **12** hours.

Tier I

Falschtiere

Illusionary Animal Spell

Available For: Mage

TR: 1	**Use:** 1 Mana	**Learn:** 1 Skill Point

Conjure illusory animals that glow and fly. Up to **3** illusory beasts appear in colors of your choosing and move around at your command. The animals make no noise and pass through objects.

Tier I

Flammenwerfer

Flamethrower Spell

Available For: Mage

TR: 1	**Use:** 2 Mana	**Learn:** 3 Skill Point

Expel flames in a direction. Make a Primary Trait Attack against all creatures in **Close** range in a

direction of your choice. On a success, the target takes **1d6 + 3** magic damage. Targets you fail against take half damage.

Tier I

Feder

Feather Leap Spell

Available For: Mage

TR: 1	**Use:** 1 Mana (Concentration)	**Learn:** 2 Skill Point

Decrease the gravity on creatures and objects. Up to **3** targets of your choosing within **Very Close** range get this effect. Targets fall safely to the ground and gain a **+1** bonus to checks made to climb, jump, or hang.

Tier I

Anvisieren

Mana Highlight Spell

Available For: Mage

TR: 1	**Use:** 1 Mana (Concentration)	**Learn:** 2 Skill Point

Attempt to lock onto a creature's mana signature within **Close** range. Make a Primary Trait check. On success, highlight the creature, allowing you to see them at any range, even through walls object.

Tier I

Cure Wounds

Healing Spell

Available For: Priest

TR: 1	**Use:** 2 Mana	**Learn:** 3 Skill Point

Cause basic wounds to close and mend. A creature of your choosing within **Melee** range recovers **1** Hit Point.

Tier I

Identify Illness

Diagnosing Spell

Available For: Priest

TR: 1	**Use:** 1 Mana	**Learn:** 2 Skill Point

Identify the illness of a creature within Melee range. Choose up to **1** of the following facts to discover about the illness:

- You learn how the illness spreads or manifests within creatures.
- You learn how long the illness has been affecting the creature.
- You learn the symptoms of the illness throughout its lifetime in a creature.
- You learn of a potential cure, if there is one.

Tier I

Protective Barrier

Shield Spell

Available For: Priest

TR: 1	**Use:** 1 Mana (Concentration)	**Learn:** 2 Skill Point

Conjure a large spherical barrier that encompasses creatures in **Melee** range around you that blocks physical and magical effects. The barrier has **2** Hit Points and damage thresholds of **0/5/10**.

Tier I

Spear of the Goddess

Spear Spell

Available For: Priest		
TR: 1	**Use:** 2 Mana	**Learn:** 3 Skill Point
Fire a beam of radiant light at enemies. Make a Primary Trait attack against **1** target in Far range. On a success, deal **2d6 + 2** magic damage to the target.		
Tier I		

Minor Wonder Wondrous Spell		
Available For: Priest		
TR: 1	**Use:** 1 Mana	**Learn:** 1 Skill Point
A spell meant to conjure a simple but wondrous effect as evidence of the Goddess's magic. Choose **1** of the following effects: ● A ray of moonlight or sunlight, depending on the time of day, begins to shine down on a point within **Very Close** range. ● A creature or object within **Very Close** range floats for a few seconds. ● A **cup or flask** of water is purified of contaminants or poison. You may work with the GM to produce additional wondrous effects with this spell.		
Tier I		

Holy Flame Flame Spell		
Available For: Priest		
TR: 1	**Use:** 1 Mana	**Learn:** 3 Skill Point
Unleash a blast of holy fire from yourself. Make a Primary Trait Attack against all creatures within		

Very Close range. On a success, they take **1d8** magic damage and are inflicted with **1** Aflame.
Tier I

Tier 2 Spells

Unvollständige Explosion

Incomplete Explosion Spell

Available For: Mage

TR: 2	**Use:** 3 Mana	**Learn:** 4 Skill Point

Concentrate on molding the mana before firing a concentrated beam of light that detonates at a point within Far range. Make a Primary Trait Attack against all creatures in **Very Close** range of the point. On a success, the target takes **1d8 + 1** magic damage to the target.

Tier I

Weia

Wire Spell

Available For: Mage

TR: 2	**Use:** 2 Mana (Concentration)	**Learn:** 4 Skill Point

Conjure mana into a razor-thin wire. Make a Primary Trait Attack against a creature within **Very Close** range. On a success, the target is **Restrained**. Until the spell ends, the target takes **1d10 + 2** magic damage whenever they take an action.

Tier I

Sar

Blade Spell

Available For: Mage

TR: 2	**Use:** 2 Mana (Concentration)	**Learn:** 4 Skill Point

Conjure mana into a blade. While concentrating on this spell, you may make a Primary Trait Attack against a creature in Melee range. On a success, they take **1d6 + your Primary Trait** magic damage.

Tier I

Blinking Lights

Soothing Spell

Available For: Priest

TR: 1	**Use:** 3 Mana	**Learn:** 5 Skill Point

Conjure a soothing atmosphere within **Very Close** range, allowing others to rest easily. If creatures within the atmosphere take an uninterrupted short or long rest, they regain **1** Hit Point.

Tier I

Silver Knife

Silver Spell

Available For: Priest

TR: 1	**Use:** 3 Mana	**Learn:** 5 Skill Point

Form silver dust into a thin needle. Make a Primary Trait Attack against **1** creature within **Close** range. On a success, they take **1d12 + 1** magic and are Drained.

Tier I

Tier 1 Techniques

Parkour!

Parkour Technique

Available For: Hero, Monk, Thief

TR: 1	**Use:** 1 Stamina	**Learn:** 2 Skill Points

Traverse difficult environments with ease. When making a **check** to jump, climb, or swing through environments, use this technique to gain a **+2** bonus to your roll.

Tier I

Deep Cut

Cut Technique

Available For: Hero, Thief, Warrior

TR: 1	**Use:** 1 Stamina	**Learn:** 2 Skill Points

When you roll weapon damage dice, reroll **1** of the dice, taking the higher result.

Tier I

At Your Side

Protection Technique

Available For: Hero, Warrior

TR: 1	**Use:** 2 Stamina	**Learn:** 2 Skill Points

Dive towards your allies to protect them. When an ally within Close range takes damage, immediately dash to enter their Melee range and decrease their damage **1** threshold.

Tier I

Slip

Evasive Technique

Available For: Hero, Monk, Thief

TR: 1	**Use:** 1 Stamina	**Learn:** 2 Skill Points

When an enemy makes an attack check against you, roll **1d6** and add the value to your Evasion for the attack.

Tier I

Close Bond

Rallying Technique

Available For: Hero

TR: 1	**Use:** 3 Stamina	**Learn:** 3 Skill Points

Call upon your bond with an ally, instilling them with courage and bravery in the face of death. They gain 1 Miracle. If they are **Bloodied**, they regain **1** Stamina or Mana.

Tier I

Steadfast

Stubborn Technique

Available For: Monk, Warrior

TR: 1	**Use:** 2 Stamina (Concentration)	**Learn:** 2 Skill Points

Remain rooted to your spot and defend yourself. Become Stanced and reduce all incoming damage by **1** threshold.

This Technique ends if you move or are forcibly moved.

Tier I

Ki Sense

Ki Technique

Available For: Monk

TR: 1	**Use:** 2 Stamina	**Learn:** 2 Skill Points

Sense the natural energies flowing through a creature and make a Primary Trait check against 1 creature within Close range. On a success, learn **1** of the following facts about them:

- Their emotional state and surface-level thoughts
- How much Stamina they have
- How many Hit Points they have
- Their highest Basic Trait

Tier I

Reckless

Reckless Technique

Available For: Monk, Warrior

TR: 1	**Use:** 2 Stamina	**Learn:** 1 Skill Points

Gain advantage on an attack check with a weapon. On a hit, deal an additional **1d6** damage.

Tier I

Cloak and Dagger

Piercing Technique

Available For: Thief

TR: 1	**Use:** 1 Stamina	**Learn:** 2 Skill Points

When you make an attack check against an enemy while Hidden, deal **1d8** damage to them, regardless of whether the attack hits or misses.

Tier I

Tearaway Disguise

Disguise Technique

Available For: Thief

TR: 1	**Use:** 1 Stamina	**Learn:** 2 Skill Points

Needing only a few minutes to prepare, you can don a disguise of a person you have met before or an appearance you choose. While disguised, you have a **+2** bonus on checks made to avoid detection.

Start a progress counter that increments whenever you take an Action. When the counter reaches your Primary Trait, your disguise drops.

You can prepare prior to using this Technique, having multiple disguises prepared. However, you can only have a number of disguises equal to your Primary Trait.

Tier I

Eyes on Me

Taunting Technique

Available For: Warrior

TR: 1	**Use:** 1 Stamina	**Learn:** 3 Skill Points

Shout or, in some other way, draw attention to yourself. Make a Primary Trait check against **1** target within **Close** range. On a success, the enemy is Taunted. While Taunted, the enemy must spend effort to harm you.

Tier I

Tier I

Not On My Watch

Pickup Technique

Available For: Hero, Warrior

TR: 1	**Use:** 1 Stamina	**Learn:** 3 Skill Points

Aid an ally in their predicament. Choose **1** creature within **Melee** range that is Exposed, Dazed, Disarmed, or Restrained and end the Condition.

Tier I

Bold Presence

Bold Technique

Available For: Hero, Thief, Warrior

TR: 2	**Use:** 2 Stamina	**Learn:** 2 Skill Points

When you make a Charisma check, roll **1** d8 and add the highest roll to your check.

Tier I

Pushing Strike

Pushing Technique

Available For: Monk, Warrior

TR: 2	**Use:** 1 Stamina	**Learn:** 2 Skill Points

When you succeed an Attack check against a creature within **Melee** range, push them to **Very Close** range from their original position.

Tier I

Grappling Strike

Grappling Technique

Available For: Monk, Warrior

TR: 2	**Use:** 1 Stamina	**Learn:** 2 Skill Points

When you succeed an Attack check against a creature within Melee range, inflict Restrained on them. While Restrained, they have a **-1** to Attack checks.

Tier 2 Techniques

Try Again
Finisher Technique

Available For: Hero, Warrior

TR: 2	**Use:** 1 Stamina	**Learn:** 3 Skill Points

When an enemy within **Melee** range misses an Attack check against you, inflict Taunted on the enemy.

Tier I

Don't Stop Me Now
Finisher Technique

Available For: Hero, Monk, Warrior

TR: 2	**Use:** 2 Stamina (Concentration)	**Learn:** 5 Skill Points

When you make an attack against a Bloodied creature, deal an additional **1d6** damage and inflict Exposed on the enemy. This technique ends if the target is farther than **Close** range.

Tier I

Disarming Strike
Disarming Technique

Available For: Monk, Thief

TR: 2	**Use:** 2 Stamina	**Learn:** 4 Skill Points

Strike at your enemy's arms to loosen their grip. Make a Primary Trait Attack against **1** target within **Very Close** range. On a success, the enemy is Disarmed and takes **1d4** damage.

Tier I

Poisoned Strike
Poisonous Technique

Available For: Thief

TR: 2	**Use:** 2 Stamina	**Learn:** 4 Skill Points

When you succeed an Attack check against a creature within **Melee** range, inflict 1d4 + **1** Poison onto the target.

Tier I

Second Wind
Breathing Technique

Available For: Hero, Warrior

TR: 2	**Use:** 3 Stamina	**Learn:** 4 Skill Points

Focus your breathing to keep fighting. Regain **1** Hit Point and remove **1** Condition afflicting you.

Tier I

Lean on Me
Aiding Technique

Available For: Hero, Monk, Warrior

TR: 2	**Use:** 2 Stamina	**Learn:** 3 Skill Points

When an ally within **Very Close** range makes a check, grant them advantage.

Tier I

Tactical Assessment

Assessing Technique

Available For: Monk, Thief, Warrior

TR: 2	**Use:** 1 Stamina	**Learn:** 3 Skill Points

When you make a check to discover something about an environment, roll **1** d8 and add the highest roll to your check.

Tier I

Ricochet

Ricochet Technique

Available For: Thief, Warrior

TR: 2	**Use:** 2 Stamina	**Learn:** 4 Skill Points

When you make an Attack check against a creature farther than Close range, target **1** additional creature within **Very Close** range of the original target.

Set Up

Teamwork Technique

Available For: Hero, Thief, Warrior

TR: 2	**Use:** 2 Stamina (Concentration)	**Learn:** 4 Skill Points

Make a Primary Trait check against 1 creature within **Melee** range. On a success, inflict the Exposed condition. The next ally that deals damage to the target deals an additional **2d8** physical damage and ends the technique.

Slim Profile

Slim Technique

Available For: Monk, Thief

TR: 2	**Use:** 2 Stamina (Concentration)	**Learn:** 4 Skill Points

Present a slim profile of your body to your enemies. Become Stanced and add your Primary Trait to your Evasion.

This Technique ends if there is more than **1** creature within Melee range.

Unrelenting

Unrelenting Technique

Available For: Hero, Monk, Warrior

TR: 2	**Use:** 2 Stamina (Concentration)	**Learn:** 4 Skill Points

Begin a flurry of crushing blows onto your enemies. Become Stanced and deal an additional **d4** of damage on Attack checks.

This Technique ends if you fail on an Attack check.

Tier 3 Techniques

Accelerant Accelerating Technique		
Available For: Thief		
TR: 2	**Use:** 3 Stamina	**Learn:** 4 Skill Points
Accelerate the poison in someone's system. Choose a creature within **Very Close** range. If they have the Poisoned condition, force them to lose Stamina as if they had taken **1** action.		
Tier I		

Conditions

Bloodied

A Bloodied creature has less than or equal to half of its Hit Points remaining.

Hidden

A Hidden creature has its exact position obscured from its adversaries. While Hidden, you have advantage on Attack checks. The Hidden Condition automatically ends when:

- You or a creature you are hiding from moves into an area where there is clear line of sight.
- You make an Attack, cast a spell, or use a Technique that targets a creature you are hiding from.

Exposed

An Exposed creature has its defenses lowered. While Exposed, you can not reduce damage by spending Stamina. This does not prevent Actions, Spells, or Techniques that can reduce damage.

Dazed

A Dazed creature is momentarily unsure of their surroundings. While Dazed, you can not take Actions. The Dazed Condition can be ended by spending 1 Stamina.

This Condition can not be removed via a check or as a GM move.

Disarmed

A Disarmed creature has either lost their weapon or is unable to utilize it. While Disarmed, you can not make **attack checks**.

Drained

A Drained creature finds it more difficult to utilize their abilities. While Drained, each point of Mana or Stamina you spend costs 1 additional point.

Restrained

A Restrained creature is prevented from moving. While Restrained, you can not move.

Taunted

A Taunted creature is focused on the taunting creature. While Taunted, you must take harmful Actions against the creature that Taunted you. If you are Taunted by multiple creatures, you can choose any of them to harm.

Poisoned

A Poisoned creature has toxins in its body, slowly killing it. Poisoned can be stacked. While Poisoned, you lose 1 Stamina for each stack of Poison whenever you take an Action. When you take an Action, 1 stack of Poison is removed.

This Condition can not be removed via a check or as a GM move. Instead, spending 1 Miracle or 1 Doom as an Action removes 1d4 + your Total Tier stacks of Poison.

Aflame

An Aflame creature is on fire. Aflame can be stacked. While Aflame, you take 1 damage for each stack of Aflame whenever you take an Action.

This Condition can not be removed via a check or as a GM move. Instead, spending 1 Stamina as an action removes 1d4 + your Total Tier stacks of Aflame.

Bleeding

A Bleeding creature is losing large quantities of blood. While Bleeding, you lose 1 Hit Point whenever you take an Action.

This condition can be removed by regaining Hit Points. However, you regain 1 less Hit Point.

Stanced

A Stanced creature has entered a position that grants them a certain effect, often determined by the Technique or feature that caused them to enter this stance.

If you would gain the Stanced condition while already Stanced, you lose the previous Stance's effects.

Races

Human

Humans are short-lived but highly innovative and curious people. They are highly sociable, compensating for their short lifespans by passing on their knowledge to the next generation. As a result, their species has advanced rapidly in fields like medicine, engineering, and magic.

Human adults often reach heights between 4 and 7 feet tall, and live for up to a century.

Generational Knowledge. You gain an additional Experience when you create your character.

Adaptive. Once per session, you can deactivate one of your Spells or Techniques and activate a different ability.

Elf

Elves are a rare, often isolated people who are capable of living for thousands of years. To them, months could feel like a mere day. Elves tend to have difficulty with boredom and feel little urgency outside of life-threatening events. Being living witnesses to history, they are often well learned and well travelled.

Elven adults often grow to be between 4 and 5 feet tall, and live for so long that many could consider them ageless.

Expertise. One of your Experiences starts with a +4 modifier instead of a +2.

Unphased. When you make a Basic Trait **check** to avoid or remove a Condition, you may spend a Stamina to add 1d4 to the total.

Dwarf

Dwarves are naturally strong and durable people, often possessing talents in physically demanding professions. Dwarven culture often pushes them to master a single skill like blacksmithing or combat. Though they live for centuries, many still seek companionship with humans and their own kind.

Dwarven adults often grow to be between 3 and 4 feet tall and live for about 4 centuries.

Durable. You have a +0/+1/+2 to your damage thresholds.

Inventive. When you invent your own Spell or Technique to learn, the learning cost of the ability is reduced by 1.

Equipment

Tier 1 Weapons

Name	Trait	Range	Damage	Burden	Feature
Longsword	Dexterity	Melee	d10 + DEX	Two-Handed	**Parry:** Spend a Stamina to add your Dexterity modifier to your Evasion for a single attack.
Greatsword	Strength	Melee	d10 + STR	Two-Handed	**Breaking:** If an enemy uses Stamina to reduce damage thresholds, it costs an additional stamina.
Battleaxe	Strength	Melee	d12 + STR	Two-Handed	**Cleave:** Spend a Stamina to target a second creature within range, imposing disadvantage on your attack roll.
Mace	Strength	Melee	d8 + STR	One-Handed	**Crushing:** On a failed attack, still deal damage equal to your Strength.
Warhammer	Strength	Melee	d12 + STR	Two-Handed	**Crushing:** On a failed attack, still deal damage equal to your Strength.
Dagger	Agility	Melee	d6 + AGI	One-Handed	**Critical:** Rolling a NAT 19 counts as a critical success with this weapon.
Quarterstaff	Instinct	Melee	d8 + INS	Two-Handed	**Forceful:** On a successful attack, you may push the target to Very Close range.
Rapier	Charisma	Melee	d8 + CHA	One-Handed	**Parry:** Spend a Stamina to add your Dexterity modifier to your Evasion for a single attack.
Halberd	Strength	Very Close	d10 + STR	Two-Handed	**Forceful:** On a successful attack, you may push the target to Very Close range.
Spear	Dexterity	Very Close	d8 + DEX	One-Handed	**Toss:** You can target a creature within Close range by throwing this weapon.
Shortsword	Instinct	Melee	d6 + INS	One-Handed	**Parry:** Spend a Stamina to add your Dexterity modifier to your Evasion for a single attack.
Shortbow	Agility	Far	d6 + AGI	Two-Handed	**Double-Tap:** On a successful attack, you may spend a Stamina to make another attack against the same target.
Crossbow	Dexterity	Far	d10 + DEX	Two-Handed	**Piercing:** You may target another creature within range if they are in line of the attack.
Longbow	Strength	Far	d10 + STR	Two-Handed	**Breaking:** If an enemy uses Stamina to reduce damage thresholds, it costs an additional stamina.
Buckler	Agility	Melee	d4 + AGI	One-Handed	**Concussive:** On a successful attack, forgo damage to Daze the target.
Round Shield	Strength	Melee	d6 + STR	One-Handed	**Protective:** Gain a +0/1/2 bonus to your damage thresholds.
Tower Shield	Strength	Melee	d8 + STR	One-Handed	**Barrier:** When an ally within Very Close range takes damage, you may spend 1 Stamina to reduce it by 1 threshold. **Heavy:** -1 to Evasion.

Equipment

Tier 1 Armor

Name	Damage Threshold Bonus	Feature
Light Armor	+1/2/4	—
Medium Armor	+2/4/8	**Heavy:** -1 to Evasion.
Heavy Armor	+3/6/12	**Very Heavy:** -2 to Evasion

Starting Magical Items

When your GM allows, you can pick or roll on this table to get an item to start your adventure with.

Roll	Name	Effect
1	Premium Tent	When you take a Long Rest, you regain 1 Hit Point and 1 Stamina
2	Cracked Mirror	When the GM rolls a Critical Success, you may give them 1 Doom to force them to reroll.
3	Sniper's Quiver	When you make an attack with an arrow stored in this quiver, increase the range of your attack by 1 Tier.
4	Everbright Torch	This torch can be lit at will and can not be snuffed out by environmental effects like wind, water, or a lack of oxygen.
5	Telefon	A pair of carved stones that allows the two wielders to communicate across any distance.
6	Medic's Pouch	When you take the Tend to Wounds Rest Action, another creature regains 1d4 Hit Points.
7	Bag of Carrying	This bag features three pouches, each capable of holding a single item. While inside the bag, the item becomes weightless. Each item must be able to fit in a 5 ft. x 5 ft. cube.
8	Calming Incense	When you take the Relax Your Body Rest Action, another creature regains 1d4 Stamina.
9	Holy Pendant	Once per session, you may be granted minor divine aid. Grant one of your allies a Miracle.
10	Bag of Gold	A small pouch containing 5 gold coins.
11	Anchor Charm	The first time you take Minor or greater damage, automatically reduce it by 1 threshold. This item regains its power when you take a Rest.
12	Mimic Detector	Spend 1 Stamina to detect if an object is a mimic. If this item is used more than once a day, subsequent detections have a 50% chance of giving the wrong answer.

Tier 1 Items

Roll	Name	Effect
1	Premium Tent	When you take a Long Rest, you regain 1 Hit Point and 1 Stamina
2	Cracked Mirror	When the GM rolls a Critical Success, you may give them 1 Doom to force them to reroll.
3	Rosethorn Pendant	Spend 1 Stamina to gain advantage on a Charisma check.
4	Schatten Cloak	Spend 1 Stamina to gain advantage on a Dexterity check.
5	Kraft Gauntlets	Spend 1 Stamina to gain advantage on a Strength check.
6	Kurz Boots	Spend 1 Stamina to gain advantage on an Agility check.
7	Eule Glasses	Spend 1 Stamina to gain advantage on an Instinct check.
8	Gelehrte Pen	Spend 1 Stamina to gain advantage on a Knowledge check.
9	Sniper's Quiver	When you make an attack with an arrow stored in this quiver, increase the range of your attack by 1 Tier.
10	Everbright Torch	This torch can be lit at will and can not be snuffed out by environmental effects like wind, water, or a lack of oxygen.
11	Telefon	A pair of carved stones that allows the two wielders to communicate across any distance.
12	Manacles	A pair of cuffs with a key that can be placed on a creature to Restrain them. The DC to remove them is 20.
13	Medic's Pouch	When you take the Tend to Wounds Rest Action, another creature regains 1d4 Hit Points.
14	Rune of Feuer	A Rune that can be applied to a weapon, granting it additional properties. Unless otherwise stated, a weapon may only have 1 Rune at once, and you must be wielding the weapon to utilize the Rune. **Feuer.** When you deal damage with the weapon, spend stamina to inflict 1d4 Aflame to a single target.
15	Arcane Gem	When augmenting a Spell, you augment it an additional time.
16	Martial Manual	When augmenting a Technique, you augment it an additional time.
17	Rune of Brise	A Rune that can be applied to a weapon, granting it additional

		properties. Unless otherwise stated, a weapon may only have 1 Rune at once, and you must be wielding the weapon to utilize the Rune. **Brise.** When you deal damage with the weapon, push a single target to Very Close range.
18	Bag of Carrying	This bag features three pouches, each capable of holding a single item. While inside the bag, the item becomes weightless. Each item must be able to fit in a 5 ft. x 5 ft. cube.
19	Calming Incense	When you take the Relax Your Body Rest Action, another creature regains 1d4 Stamina.
20	Luckstone	When you make a Basic Trait check, add a +1 to your roll. Having multiple Luckstones does not stack.

Tier 1 Consumables

Roll	Name	Effect
1	Basic Potion of Healing	You regain 1d4 Hit Points.
2	Basic Potion of Stamina	You regain 1d4 Stamina.
3	Basic Potion of Mana	You regain 1d4 Mana.
4	Basic Poison	Inflicts 1 Poisoned. This Poison can be applied through consumption, injection, or poured into an open wound.
5	Fleetfoot Potion	Until your next rest, gain a +2 bonus to Agility checks.
6	Empowered Potion	Until your next rest, gain a +2 bonus to Strength checks.
7	Finesse Potion	Until your next rest, gain a +2 bonus to Dexterity checks.
8	Observant Potion	Until your next rest, gain a +2 bonus to Instinct checks.
9	Bewitching Potion	Until your next rest, gain a +2 bonus to Charisma checks.
10	Scholarly Potion	Until your next rest, gain a +2 bonus to Knowledge checks.
11	Golden Root	You gain 1 Miracle.
12	Panax	Remove a Condition affecting you without needing a check.
13	Koffein	At your next rest, you do not need to sleep (if it were a Long Rest) and can take an additional Rest Action.
14	Katze	Until your next rest, see perfectly in the darkness up to Far range.
15	Kosmetika	By applying this makeup kit, magically change your appearance to appear as a different person until your next rest.
16	Greater Potion of Healing	You regain 1d6 Hit Points.
17	Greater Potion of Stamina	You regain 1d6 Stamina.
18	Greater Potion of Mana	You regain 1d6 Mana.
19	Greater Poison	Inflicts 2 Poisoned. This Poison can be applied through consumption, injection, or poured into an open wound.
20	Phoenix Feather	You regain a number of Hit Points, Stamina, and Mana of your choosing with a combined total of 2d6. However, you can not regain any of those resources until your next Long Rest.
